Rood, 2016-04-09 This book demystifies the models we use to simulate present and future climates allowing readers to better understand how to use climate model results In order to predict the future trajectory of the Earth's climate climate system simulation models are necessary When and how do we trust climate model predictions The book offers a framework for answering this question It provides readers with a basic primer on climate and climate change and offers non technical explanations for how climate models are constructed why they are uncertain and what level of confidence we should place in them It presents current results and the key uncertainties concerning them Uncertainty is not a weakness but understanding uncertainty is a strength and a key part of using any model including climate models Case studies of how climate model output has been used and how it might be used in the future are provided The ultimate goal of this book is to promote a better understanding of the structure and uncertainties of climate models among users including scientists engineers and policymakers

Perceptual Computing Jerry Mendel, Dongrui Wu, 2010-07-16 Explains for the first time how computing with words can aid in making subjective judgments Lotfi Zadeh the father of fuzzy logic coined the phrase computing with words CWW to describe a methodology in which the objects of computation are words and propositions drawn from a natural language Perceptual Computing explains how to implement CWW to aid in the important area of making subjective judgments using a methodology that leads to an interactive device a Perceptual Computer that propagates random and linguistic uncertainties into the subjective judgment in a way that can be modeled and observed by the judgment maker This book focuses on the three components of a Perceptual Computer encoder CWW engines and decoder and then provides detailed applications for each It uses interval type 2 fuzzy sets IT2 FSs and fuzzy logic as the

mathematical vehicle for perceptual computing because such fuzzy sets can model first order linguistic uncertainties whereas the usual kind of fuzzy sets cannot Drawing upon the work on subjective judgments that Jerry Mendel and his students completed over the past decade Perceptual Computing shows readers how to Map word data with its inherent uncertainties into an IT2 FS that captures these uncertainties Use uncertainty measures to quantify linguistic uncertainties Compare IT2 FSs by using similarity and rank Compute the subsethood of one IT2 FS in another such set Aggregate disparate data ranging from numbers to uniformly weighted intervals to nonuniformly weighted intervals to words Aggregate multiple fired IF THEN rules so that the integrity of word IT2 FS models is preserved Free MATLAB based software is also available online so readers can apply the methodology of perceptual computing immediately and even try to improve upon it Perceptual Computing is an important go to for researchers and students in the fields of artificial intelligence and fuzzy logic as well as for operations researchers decision makers psychologists computer scientists and computational intelligence experts
