

# Model-based reinforcement learning

- **Basic idea:** try to learn the model of the MDP (transition probabilities and rewards) and learn how to act (solve the MDP) simultaneously
- **Learning the model:**
  - Keep track of how many times state  $s'$  follows state  $s$  when you take action  $a$  and update the transition probability  $P(s' | s, a)$  according to the relative frequencies
  - Keep track of the rewards  $R(s)$
- **Learning how to act:**
  - Estimate the utilities  $U(s)$  using Bellman's equations
  - Choose the action that maximizes expected future utility:

$$\pi^*(s) = \arg \max_{a \in A(s)} \sum_{s'} P(s' | s, a) U(s')$$

Fischbein, 2012-12-06 About a year ago I promised my friend Fischbein a preface to his book of which I knew the French manuscript Now with the printer's proofs under my eyes I like the book even better than I did then because of and influenced by new experiences in the meantime and fresh thoughts that crossed my mind Have I been influenced by what I remembered from the manuscript If so it must have happened unconsciously But of course what struck me in this work a year ago struck a responsive chord in my own mind In the past mathematics teaching theory has strongly been influenced by a view on mathematics as a heap of concepts and on learning mathematics as concepts attainment Mathematics teaching practice has been jeopardised by this theoretical approach which in its most dangerous form expresses itself as a radical atomism To concepts attainment Fischbein opposes acquisition of intuitions In my own publications I avoided the word intuition because of the variety of its meanings across languages For some time I have used the term constitution of mathematical objects which I think means the same as Fischbein's acquisition of intuitions indeed as I view it constituting a mental object precedes its conceptualising and under this viewpoint I tried to observe mathematical activities of young children      Mobile Ad Hoc Networks G Ram Mohana Reddy, Kiran M, 2016-08-19 In recent years a lot of work has been done in an effort to incorporate Swarm Intelligence SI techniques in building an adaptive routing protocol for Mobile Ad Hoc Networks MANETs Since centralized approach for routing in MANETs generally lacks in scalability and fault tolerance SI techniques provide a natural solution through a distributed approach for the adaptive routing for MANETs In SI techniques the captivating features of insects or mammals are correlated with the real world problems to find solutions Recently several applications of bio inspired and nature inspired algorithms in telecommunications and computer networks have achieved remarkable success The main aims objectives of

this book Mobile Ad Hoc Networks Bio Inspired Quality of Service Aware Routing Protocols are twofold firstly it clearly distinguishes between principles of traditional routing protocols and SI based routing protocols while explaining in detail the analogy between MANETs and SI principles Secondly it presents the readers with important Quality of Service QoS parameters and explains how SI based routing protocols achieves QoS demands of the applications This book also gives quantitative and qualitative analysis of some of the SI based routing protocols for MANETs      **Thesaurus of ERIC Descriptors** ,1968 4th 7th eds contain a special chapter on The role and function of the thesaurus in education by Frederick Goodman
