**Creative Coding with Processing for Designers** Scott Murray, 2015 UI/UX designers are comfortable creating pixel perfect mockups using tools like Photoshop, Illustrator and Sketch. We love prototyping designs in order to test them but static mockups don't move. How can you possibly know what the finished moving interactive piece will feel like? Luckily with creative coding you can create live interactive moving mockups that not only look right but feel right. Working with code empowers you to define the rules of interaction and qualities of motion in terms more specific than when. Then you can test your prototype, refine and test again until it feels just right. In this half hour presentation Scott Murray introduces Processing, a free creative coding tool for artists and designers. It's used around the world for prototyping and exploratory UI/UX work. Scott will show several example projects made with Processing. Then he will conduct a brief workshop introducing some of the core concepts of creative coding including variables, functions, repetition and logic to illustrate how designers can create moving interactive prototypes with this powerful tool. This presentation is for designers who have extensive visual experience but are new to coding. No prior knowledge of programming concepts is assumed.
