Criteria/Question	Design Option 1
Can it be carried by one person?	Rating:3 This design contains a large amount of wood pieces of different shapes and angles, thus it may have a large volume and a heavier weight.
Is the product ergonomically suitable?	Rating:4 A big and clear seat of the design makes it easy to access by hand, but there are too many edges on the surface which may pose a safety risk. Moreover, it does not have a fall limit, therefore cannot be installed on the wall, this will limit the positioning of the actual product.
Does the product show its purpose to people clearly?	Rating:2 Too many edges make it difficult to place labelled instructions of the product.
Are the materials sustainable?	Rating:4 The main materials of wood is sustainable and recyclable. However, the large amount of wood which is required results in a wastage of materials.
Does it have a suitable appearance for the environment in the end-user's working place?	Rating:3 The geometric shape of the product gives a modern look, but the rigid and bright colour of the product makes it not quite suitable to be placed in there's working space.

Food Industry Design, Technology and Innovation Helmut Traitler, Birgit Coleman, Karen Hofmann, 2014-11-17 Food products have always been designed but usually not consciously Even when design has been part of the process it has often been restricted to considerations of packaging logos fonts and colors But now design is impacting more dramatically on the complex web that makes up our food supply and beginning to make it better Ways of thinking about design have broad applications and are becoming central to how companies compete To succeed food designers need to understand consumers and envision what they want and to use technology and systems to show they can deliver what has been envisioned They also need to understand organizations in order to make innovation happen in a corporation The authors of this book argue that design has been grossly underestimated in the food industry The role of design in relation to technology of every kind materials mechanics ingredients conversion transformation etc is described discussed challenged and put into proper perspective The authors deftly analyze and synthesize complex concepts inspiring new ideas and practices through real world examples The second part of the book emphasizes the role of innovation and how the elements described and discussed in the first parts design technology business must join forces in order to drive valuable innovation in complex organizations such as large and not so large food companies Ultimately this groundbreaking book champions the implementation of a design role in defining and executing business strategies and business processes Not only are designers tremendously important to the present and future successes of food corporations but they should play an active and decisive role at the executive board level of any food company that strives for greater success
