### Solutions To Problems From Chapter 1

- 1.1 Several problems arise if the jobs shift from manufacturing to service. One is that service jobs pay less. Many service jobs are minimum wage, while hourly wages for manufacturing jobs have historically exceeded the minimum wage by a substantial margin. As a result the standard of living will necessarily decline. Furthermore, manufacturing allows the firm to capture the payoff for the development of new technology. If this payoff is lost, so is the incentive to invest in research.
- 1.2 The focus on short term ROI may discourage investment in research projects, especially those that might not bear fruit for many years. It promotes a short term view of strategy that could ultimately hurt the firm's competitive position in the marketplace.
- 1.3 There are certainly examples of low cost providers that have been successful, but overall it is a risky strategy. Some examples here include the Korean automakers, who continue to struggle to break into the American marketplace. Another example is Packard Bell Computers. The company positioned itself as a low cost provider of personal computers, and at first was successful selling through discount channels. However, inferior product quality led to the demise of the firm.
- 1.4 If we define quality as the degree that a product performs relative to its intended purpose, then both GEO and Ferrari product quality products. The Geo automobile is designed to provide basic transportation with high reliability at low cost. Ferrari aims to provide maximum performance regardless of cost. These two products compete in entirely different markets.
- 1.5
  - a) Time Horizon. Strategy decisions may be distinguished by the length of time required for the decision to take effect. Short term decisions include purchasing, production and personnel scheduling, and short-term inventory control. Medium-range decisions include demand and requirements forecasting, determining the size and mix of the work force, establishing channels of distribution, and setting target levels for inventory and service. Long-range decisions include the timing, locating, and scaling of new facilities.

Wu,2012-12-06 A technological book is written and published for one of two reasons it either renders some other book in the same field obsolete or breaks new ground in the sense that a gap is filled The present book aims to do the latter On my return from industry to an academic career I started writing this book because I had seen that a gap existed Although a great deal of information appeared in the published literature about various technical aspects of advanced manufacturing technology AMT surprisingly little had been written about the systems context within which the sophisticated hardware and software of AMT are utilized to increase efficiency Therefore I have attempted in this book to show how structured approaches in the design and evaluation of modern manufacturing plant may be adopted with the objective of improving the performance of the factory as a whole I hope this book will be a contribution to the newly recognized multidisciplinary engineering function known as manufacturing systems engineering The text has been designed specifically to demonstrate the systems aspects of modern manufacturing operations including systems concepts of manufacturing operation manufacturing systems modelling and evaluation and the structured design of manufacturing systems One of the major difficulties associated with writing a text of this nature stems from the diversity of the topics involved I have attempted to solve this problem by adopting an overall framework into which the relevant topics are fitted      **A Manual of Chemical Analysis as Applied to the Examination of Medicinal Chemicals** Friedrich Hoffmann,Frederick Belding Power,1883
