Genetics and the Logic of Evolution Kenneth M. Weiss, Anne V. Buchanan, 2004-01-23 In this book the authors draw on what is known largely from recent research about the nature of genes and cells the genetics of development and animal and plant body plans intra and interorganismal communication sensation and perception to propose that a few basic generalizations along with the modified application of the classical evolutionary theory can provide a broader theoretical understanding of genes evolution and the diverse and complex nature of living organisms

The Language of Life Debra Niehoff, 2005-04-15 Cooperation requires conversation Human beings speak to one another Sounds scents and postures allow animals to make their point While individual cells can't talk hiss growl or bare their teeth they nevertheless communicate regularly Their language is based not on words or gestures but on chemistry using molecules where we would use words constructing sentences from chains of proteins The cells that make up the bodies of multicellular organisms inform wheedle command exhort reassure nurture criticize and instruct each other to direct every physiological function report every newsworthy event record every memory heal every wound And each of those chemical conversations represents an opportunity for scientists and physicians The molecular biologists who worked for over a decade to sequence the human genome have sometimes referred to that sequence as the book of life To our cells that book is no more than a dictionary only living cells can converse forming the network that allows our 60 trillion cells to function as a single organism For nearly a century researchers have been straining to hear the whispered conversations among cells hoping to master the basics of their language They know that if we can decipher and translate this cellular chatter we have the potential for sending signals of our own that could repair wounds reduce cholesterol control insulin levels or even block the reproduction of cancer cells The possibilities are as endless as they are intriguing The Language of Life is a fantastic story of discovery blending the vision of science with the poetry of life itself

The Sea and International Relations Benjamin de Carvalho, Harvard Leira, 2022-07-26 While the world's oceans cover more than seventy percent of its surface the sea has largely vanished as an object of enquiry in International Relations IR being treated either as a corollary of land or as time Yet the sea is the quintessential international space and its importance to global politics has become all the more obvious in recent years Drawing on interdisciplinary insights from IR Historical Sociology Blue Humanities and Critical Ocean Studies The sea and International Relations breaks with this trend of oceanic amnesia and kickstarts a theoretical conceptual and empirical discussion about the sea and IR by highlighting theoretical puzzles analysing broad historical perspectives and addressing contemporary challenges In bringing the sea back into IR the book reconceptualises the canvas of international relations to include the oceans as a social political economic and military space which affects the workings of world politics
