The Plow for the David Bradley Garden Tractor was designed expressly to fill the needs of the small average farmer and gardener. It can be used for plowing gardens and small plots of ground and is especially adapted to areas which are fenced in and are too small to allow a large tractor to be used.

It is well to consider that this is a relatively small plow (8 inch cut) pulled by a tractor which develops approximately 1.8 horse power. A large farm tractor develops about twice as much horse power per square inch of ground tilled as this unit does. This comparison indicates that this plow cannot be expected to do as much work as a regular farm tractor and plow combination.

The moldboard and the share are made of 5-ply soft center steel--the same as used in all high quality plows. This provides the best possible polished surface. The bottom has been designed for the minimum resistance and clearance and to utilize the minimum amount of power for the work done. This efficiency will be maintained only as long as the moldboard is highly polished and the share remains sharp. The operating instructions, page 5, 6, 7 and 8 should be studied and followed closely to maintain the best working efficiency.
