Bioinformatics Methods and Protocols Stephen Misener,Stephen A. Krawetz,2008-02-02

Computers have become an essential component of modern biology

They help to manage the vast and increasing amount of biological data and continue to play an integral role in the discovery of new biological relationships

This in silico approach to biology has helped to reshape the modern biological sciences

With the biological revolution now among us it is imperative that each scientist develop and hone today s bioinformatics skills if only at a rudimentary level

Bioinformatics Methods and Protocols was conceived as part of the Methods in Molecular Biology series to meet this challenge and to provide the experienced user with useful tips and an up to date overview of current developments

It builds upon the foundation that was provided in the two volume set published in 1994 entitled Computer Analysis of Sequence Data

We divided Bioinformatics Methods and Protocols into five parts including a thorough survey of the basic sequence analysis software packages that are available at most institutions as well as the design and implemen tion of an essential introductory Bioinformatics course

In addition we included sections describing specialized noncommercial software databases and other resources available as part of the World Wide Web and a stimul ing discussion of some of the computational challenges biologists now face and likely future
