Immekus, 2017-08-16 Evaluations of intervention programs seek to present high quality design measures and data to assess their merit and worth While evaluations differ in their purpose theoretical framework and methodology their collective aim is to obtain relevant and meaningful information to inform practice research and policy As such evaluation findings serve to build a body of knowledge on effective approaches to

promote designated psychological outcomes critical to an individual's overall health and well-being. However, as examined in this e-book, methodological weaknesses directly limit the potential of evaluations of intervention programs. As discussed by Chacón Moscoso and Sanduvete Chaves, methodological weaknesses can be attributed to how to define and measure methodological quality and the contextual dependency of instruments designed to measure this quality. In response, this e-book provides a collection of studies on methodological approaches to promote the quality of psychological interventions. Specifically, 10 original works published in the Research Topic Methodological Quality of Interventions in Psychology are included. The papers are organized into two chapters. Concretely, Chapter 1 includes studies pertaining to methodological approaches to enhance the quality of psychological intervention being context-independent solutions. Furthermore, Chapter 2 presents original work in different areas: health, education, sport, and social welfare, where methodological quality has been better assessed. Collectively, the papers in this e-book serve to expand the awareness of practitioners and researchers interested in psychological interventions of the critical role of methodological quality in this work. This research was funded by the projects 1150096 Chilean National Fund of Scientific and Technological Development FONDECYT and PSI2015 71947 REDT Spain's Ministry of Economy and Competitiveness.

### **Multi-targeted Tyrosine Kinase Inhibitors in the Treatment of Cancer and Neurodegenerative Disorders**

Halilibrahim Ciftci, Belgin Sever, Luciano Saso, Rumiana

Tzoneva, Valentina Onnis, 2024-08-07. Tyrosine kinases, which catalyze the transfer of a phosphate from ATP to a hydroxyl

group of a tyrosine residue, play a plethora of roles in the regulation of diverse functions in normal cells, including cell growth, motility, differentiation, and metabolism. Moreover, they are also associated with oncogenesis. Tyrosine kinases are mainly classified as receptor tyrosine kinases and non-receptor tyrosine kinases, including crucial members: Epidermal growth factor

receptor EGFR belongs to the ERBB family of receptor tyrosine kinases along with three other closely related receptors namely HER 2 HER 3 and HER 4 EGFR and HER 2 lead to autophosphorylation of the intracellular domain through tyrosine kinase activity and subsequent stimulation of downstream cascade that may result in proliferation suppression of apoptosis metastasis and angiogenesis On the other hand c Abl Abl 1 is a non receptor tyrosine kinase which is also essential in the regulation of several antiapoptotic and proliferative signal transduction pathways They have mainly been identified as important targets for several types of cancer such as EGFR for non small cell lung cancer glioma and colorectal cancer HER 2 for breast and colorectal cancers and Abl for chronic myeloid leukemia One of the major platforms that they have participated in is neurodegenerative disorders such as Parkinson s disease Alzheimer s disease and amyotrophic lateral sclerosis Aberrant activity of tyrosine kinases in particular EGFR and Abl have been reported to induce apoptosis and cell cycle arrest in response to a wide range of stimuli resulting in neurodegeneration and neuroinflammation The main goal of this Research Topic is to identify new and potent effective tyrosine kinase inhibitors to be effective in cancer and neurodegenerative disorders
