Soifer,2008-10-13 This is a unique type of book at least I have never encountered a book of this kind The best description of it I can give is that it is a mystery novel developing on three levels and imbued with both educational and philosophical moral issues If this summary description does not help understanding the particular character and allure of the book possibly a more detailed explanation will be found useful One of the primary goals of the author is to interest readers in particular young mathematicians or possibly pre mathematicians in the fascinating world of elegant and easily understandable problems for which no particular mathematical knowledge is necessary but which are very far from being easily solved In fact the prototype of such problems is the following If each point of the plane is to be given a color how many colors do we need if every two points at unit distance are to receive distinct colors More than half a century ago it was established that the least number of colors needed for such a coloring is either 4 or 5 or 6 or 7 Well which is it Despite efforts by a legion of very bright people many of whom developed whole branches of mathematics and solved problems that seemed much harder not a single advance towards the answer has been made This mystery and scores of other similarly simple questions form one level of mysteries explored In doing this the author presents a whole lot of attractive results in an engaging way and with increasing level of depth Eureka Math, A Story of Units: Grade 3, Module 7 Great Minds,2014-04-21 Common Core Eureka Math for

A Decade of the Berkeley Math Circle Zvezdelina Stankova, Tom Rike, 2008-11-26 Many mathematicians have been drawn to mathematics through their experience with math circles extracurricular programs exposing teenage students to advanced mathematical topics and a myriad of problem solving techniques and inspiring in them a lifelong love for mathematics Founded in 1998 the Berkeley Math Circle BMC is a pioneering model of a U S math circle aspiring to prepare our best young minds for their future roles as mathematics leaders Over the last decade 50 instructors from university professors to high school teachers to business tycoons have shared their passion for mathematics by delivering more than 320 BMC sessions full of mathematical challenges and wonders Based on a dozen of these sessions this book encompasses a wide variety of enticing mathematical topics from inversion in the plane to circle geometry from combinatorics to Rubik s cube and abstract algebra from number theory to mass point theory from complex numbers to game theory via invariants and monovariants The treatments of these subjects encompass every significant method of proof and emphasize ways of thinking and reasoning via 100 problem solving techniques Also featured are 300 problems ranging from beginner to intermediate level with occasional peaks of advanced problems and even some open questions The book presents possible paths to studying mathematics and inevitably falling in love with it via teaching two important skills thinking creatively while still obeying the rules and making connections between problems ideas and theories The book encourages you to apply the newly acquired knowledge to problems and guides you along the way but rarely gives you ready answers Learning from our own mistakes often occurs through discussions of non proofs and common problem solving pitfalls The reader has to commit to mastering the new theories and techniques by getting your hands dirty with the problems going back and reviewing necessary problem solving techniques and theory and persistently moving forward in the book The mathematical world is

huge you'll never know everything but you'll learn where to find things how to connect and use them The rewards will be substantial In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession
