interviews and site visits the book explores the fascinating world of mass media book publishing education religion parks museums and architecture during the formative years of the republic When the Communists assumed power in 1949 they projected themselves as not only military victors but also as peace restorers and cultural protectors Believing that they needed to manage culture in every arena they created an interlocking system of agencies and regulations that was supervised at the center Documents show however that there was internal conflict Censors introduced early at the Beijing Daily operated under the twofold leadership of municipal level editors but with final authorization from the Communist Party Propaganda Department Politics of Control looks behind the office doors where the ideological split between Party chairman Mao Zedong and head of state Liu Shaoqi made pragmatic editors bite their pencil erasers and hope for the best Book publishing followed a similar multi tier system preventing undesirable texts from getting into the hands of the public In addition to designing a plan to nurture a new generation of Chinese revolutionaries the party state developed community centers that served as cultural propaganda stations New urban parks were used to stage political rallies for major campaigns and public trials where threatening sects could be attacked A fascinating part of the story is the way in which architecture and museums were used to promote ethnic unity under the Chinese party state umbrella Besides revealing how interlocking systems resulted in a pervasive method of control Politics of Control also examines how this system was influenced by the Soviet Union and how nevertheless Chinese nationalism always took precedence Chang tai Hung convincingly argues that the PRC s formative period defined the nature of the Communist regime and its future development The methods of cultural control have changed over time but many continue to have relevance today *Yugoslav Communism* United States. Verification Allan S. Krass,Stockholm International Peace Research Institute,2020-11-19 Originally published in 1985 the level of anxiety and suspicion between the USA and the USSR had rarely been higher Many advocates of arms control believed that effective verification would reduce tensions and lessen the risk of war This book analyses the two main issues of verification One is technological what are the present capabilities of various verification techniques and what is their potential The devices and methods currently employed by the two major nuclear powers and by international organizations to monitor the compliance of states with arms

control or disarmament treaties are examined The second issue is political how do US and Soviet approaches compare what are the roles of domestic and bureaucratic politics and on what criteria can a workable standard of adequacy be based In short how much is enough Although the study concludes that a number of significant arms control measures can already be adequately verified modern weapons are becoming more mobile and it is becoming easier to conceal them There is a danger that the ability to hide weapons will outstrip the ability to find them Verification cannot promise to detect all violations a workable standard of adequacy in verification must derive from the ability to detect militarily significant violations

Contractual Relations David Campbell,2022-09-05 Written by one of the leading contributors to the relational theory of contract Contractual Relations authoritatively explains the form of the existing law of contract by relating it to its economic legal and sociological foundations This volume demonstrates that economic exchange and legal contract rest on a moral relationship by which each party legitimately pursues its self interest through recognition of the self interest of the other This essential relationship of mutual recognition is in stark contrast to the pursuit of solipsistic self interest that is central to the classical law of contract Self interest of this sort is not morally defensible nor does it enhance economic welfare It is for these reasons that the classical law is legally incoherent The fundamental inadequacies of the classical law s treatment of agreement consideration and remedy have emerged as the doctrines of the positive law of contract have been progressively developed to give effect to the relationship of mutual recognition The welfarist criticism of the classical law has however failed to develop a workable concept of self interest and so is at odds with what must be retained from the classical law s facilitation of economic exchange and the market economy The relational law of contract restates self interest in a morally

economically and legally attractive manner as the foundation of the social market economy of liberal socialism Contractual Relations is a fundamental critique of the classical law of contract and the welfarist response to the classical law and a major statement of the relational theory of contract This is an essential work for academics advanced students and others wishing to understand the fundamental law economics and sociology of contract and exchange
