

Biology 12 - The Digestive System - Chapter Notes

In a nutshell...

- The body uses a variety of **small molecules** (amino acids, fatty acids, glucose) for its metabolic needs. Food is mechanically and chemically broken down into these molecules during **digestion**, after which they can be taken up by body cells through the separate process of **absorption**.
- Food travels in a **one-way path** from mouth to esophagus to stomach to small intestine to large intestine to anus.
- Organs and structures in the digestive system are **specialized** for specific functions in digestion.
- **Digestive enzymes** are specific hydrolytic enzymes that have a preferred temperature and pH.
- Proper **nutrition** is necessary to health.
- **DIGESTION**: the **mechanical** and **chemical** breaking down of ingested food into particles, then into **molecules small enough** to move through epithelial cells and into the internal environment.
- **ABSORPTION**: the passage of *digested nutrients* from the gut lumen into the blood or lymph, which distributes them through the body.

The Digestive System The Open The Open Courses Library, 2019-10-26 The Digestive System Biology The digestive system is continually at work yet people seldom appreciate the complex tasks it performs in a choreographed biologic symphony Consider what happens when you eat an apple Of course you enjoy the apple's taste as you chew it but in the hours that follow unless something goes amiss and you get a stomachache you don't notice that your digestive system is working You may be taking a walk or studying or sleeping having forgotten all about the apple but your stomach and intestines are busy digesting it and absorbing its vitamins and other nutrients By the time any waste material is excreted the body has appropriated all it can use from the apple In short whether you pay attention or not the organs of the digestive system perform their specific functions allowing you to use the food you eat to keep you going This book examines the structure and functions of these organs and explores the mechanics and chemistry of the digestive processes
