Search Stefan Weitz, 2016-11-03 Search is as old as language We've always needed to find something in the jumble of human creation The first web was nothing more than passing verbal histories down the generations so others could find and remember how not to get eaten the first search used the power of written language to build simple indexes in printed books leading to the Dewey Decimal system and reverse indices in more modern times Then digital happened Besides having profound societal impacts it also made the act of searching almost impossibly complex for both engines and searchers Information isn't just words it is pictures videos thoughts tagged with geocode data routes physical world data and increasingly the machines themselves reporting their condition and listening to others Search How the Data Explosion Makes Us Smarter holds up a mirror to our time to see if search can keep up Author Stefan Weitz explores the idea of access to help readers understand how we are inventing new ways to search and access data through devices in more places and with more capabilities We are at the cusp of imbuing our generation with superpowers but only if we fundamentally rethink what search is how people can use it and what we should demand of it Search How The Data Explosion Makes Us Smarter is the first title from GreenHouse Collection Created by the founders of Insight Labs the world's first philanthropic think tank GreenHouse Collection features books that encourage deeper exploration and inquiry to inform new models for social good **The Lost History of "Talking to Computers"** William Meisel, 2025-03-17 Much science fiction has humans talking to computers an early example being HAL in the movie 2001 in 1968 That vision motivated many people to attempt making the imagined technology real including the author who founded a company developing speech recognition technology in the 1980s Speech recognition was an early part of Artificial Intelligence computers doing a task that had previously been exclusive to humans and proved to be more difficult than early pioneers expected The Lost History of Talking to Computers documents 27 years of those efforts the source of the history is the author's 309 monthly issues of a newsletter tracking the hundreds of companies trying to make a business out of this challenging technology Today we talk to computers frequently on our smartphones e.g. Apple's Siri or Google Assistant or to a home speaker e.g. Amazon's Alexa and often when we telephone a customer service number Most doctors use computer transcription of their notes for Electronic Healthcare Systems Speech recognition is teaching how to speak a new language and finding specific content in a video file How did we get here and where will it take us What can we learn from this history that has implications for the huge investments in more general AI today Readers will be amazed at how many companies were inspired by this challenge beginning more than three decades ago **Machine Learning, Optimization, and Data Science** Giuseppe Nicosia, Varun Ojha, Emanuele La Malfa, Giorgio Jansen, Vincenzo Sciacca, Panos Pardalos, Giovanni Giuffrida, Renato Umetsu, 2021-01-07 This two volume set LNCS 12565 and 12566 constitutes the refereed proceedings of the 6th International Conference on Machine Learning Optimization and Data Science LOD 2020 held in Siena Italy in July 2020 The total of 116 full papers presented in this two volume post conference

proceedings set was carefully reviewed and selected from 209 submissions These research articles were written by leading scientists in the fields of machine learning artificial intelligence reinforcement learning computational optimization and data science presenting a substantial array of ideas technologies algorithms methods and applications Dynamics in Chinese Digital Commons Hu Ling,2024-12-09 The book provides an up to date comprehensive and critical explanation of digital commons in China It aims to reshape the theoretical discussion of digital commons stressing the significance of digital mode of production and power division structure between government and digital platforms both characters shed light on how China has developed its digital economy and maintained a relatively innovative cyberspace during the past 20 years This book could serve as a foundational analysis for future studies on China s Internet The book will appeal to scholars entrepreneurs and policymakers interested in digital commons governance of cyberspace and China s political economy

Simple Heuristics that Make Us Smart Gerd Gigerenzer,Peter M. Todd,ABC Research Group,2000-10-12 Simple Heuristics That Make Us Smart invites readers to embark on a new journey into a land of rationality that differs from the familiar territory of cognitive science and economics Traditional views of rationality tend to see decision makers as possessing superhuman powers of reason limitless knowledge and all of eternity in which to ponder choices To understand decisions in the real world we need a different more psychologically plausible notion of rationality and this book provides it It is about fast and frugal heuristics simple rules for making decisions when time is pressing and deep thought an unaffordable luxury These heuristics can enable both living organisms and artificial systems to make smart choices classifications and predictions by employing bounded rationality But when and how can such fast and frugal heuristics work Can judgments based simply on one good reason be as accurate as those based on many reasons Could less knowledge even lead to systematically better predictions than more knowledge Simple Heuristics explores these questions developing computational models of heuristics and testing them through experiments and analyses It shows how fast and frugal heuristics can produce adaptive decisions in situations as varied as choosing a mate dividing resources among offspring predicting high school drop out rates and playing the stock market As an interdisciplinary work that is both useful and engaging this book will appeal to a wide audience It is ideal for researchers in cognitive psychology evolutionary psychology and cognitive science as well as in economics and artificial intelligence It will also inspire anyone interested in simply making good decisions

Information and Communications for Development 2018 World Bank, 2018-11-08 The Information and Communications for Development series looks in depth at how information and communications technologies are affecting economic growth in developing countries This new report the fourth in the series examines the topic of data driven development or how better information makes for better policies The objective is to assist developing country firms and governments in unlocking the value of the data they hold for better service delivery and decision making and to empower individuals to take more control of their personal data We are undoubtedly experiencing a data revolution in which our ability to generate process and utilize information has been magnified many times over by the machines that we increasingly rely upon This report is about how the data revolution is changing the behavior of governments individuals and firms and how these changes affect the nature of development economic social and cultural How can governments extract value from data to improve service delivery in the same way that private companies have learned to do for profit Is it feasible for individuals to take ownership of their own data and to use it to improve their livelihoods and quality of life Can developing country firms compete with the internet majors on their own turf and be even more innovative in their use of data to serve local customers better Though the report is aimed primarily at government

policy makers it also has great relevance for individuals concerned about how their personal data is used and how the data revolution might affect their future job prospects For private sector firms particularly those in developing countries the report suggests how they might expand their markets and improve their competitive edge For development professionals the report provides guidance on how they might use data more creatively to tackle long standing global challenges such as eliminating extreme poverty promoting shared prosperity or mitigating the effects of climate change The report's chapters explore different themes associated with the supply of data the technology underlying it and the demand for it An overview chapter focuses on government use of data and presentation of definitions Part I of the report then looks at the supply side of the data sector with chapters on data connectivity and capacity where data comes from how it is stored and where it goes and data technology specifically big data analytics and artificial intelligence and how this is contributing to development Part II looks at the sector's demand side with a chapter on people's use of data and another that examines how firms use digital platforms in the data economy and how that contributes to competitiveness Part III brings together the policy implications for developing country stakeholders with a chapter considering government policies for data including data protection and privacy A closing Data Notes appendix looks at statistical indicators associated with the use of data and presents the 2018 update of the Digital Adoption Index DAI a composite indicator introduced in the 2016 World Development Report Digital Dividends

Intelligent robotics Mark H. Lee,2013-03-09 An industrial robot routinely carrying out an assembly or welding task is an impressive sight More important when operated within its design conditions it is a reliable production machine which depending on the manufacturing process being automated is relatively quick to bring into operation and can often repay its capital cost within a year or two Yet first impressions can be deceptive if the workpieces deviate somewhat in size or position or worse if a gripper slips or a feeder jams the whole system may halt and look very unimpressive indeed This is mainly because the sum total of the system s knowledge is simply a list of a few variables describing a sequence of positions in space the means of moving from one to the next how to react to a few input signals and how to give a few output commands to associated machines The acquisition orderly retention and effective use of knowledge are the crucial missing techniques whose inclusion over the coming years will transform today s industrial robot into a truly robotic system embodying the intelligent connection of perception to action The use of computers to implement these techniques is the domain of Artificial Intelligence AI machine intelligence Evidently it is an essential ingredient in the future development of robotics yet the relationship between AI practitioners and robotics engineers has been an uneasy one

ever since the two disciplines were born

A Conceptual Framework for SMART Applications in Higher Education: Emerging Research and Opportunities Connelly, James Orion, Miller, Paula, 2019-11-01 With the rapid availability of information it becomes essential to keep pace with this availability as well as process the information into knowledge that has real world applications Neuroscientific methods allow an approach to this problem based on the way that the human brain already operates Over the centuries and through observation and trial and error we already know a great deal about how we can teach and learn but now we can verify this with scientific fact and discover previously unknown aspects of brain physiology These observations of brain functioning have produced many learning theories all of which have varying degrees of validity These theories in turn give birth to theories and models of instructional design which also have varying degrees of validity A Conceptual Framework for SMART Applications in Higher Education Emerging Research and Opportunities is a critical scholarly publication that explores how the brain acquires and processes information to turn information into knowledge and the role of SMART technology and how it combines and integrates visual and aural data to facilitate learning The book also discusses ways to apply what is known about teaching to how the brain operates and how to incorporate instructional design models into the teaching and learning process Highlighting various topics such as neurogenesis smart technologies and behaviorism this book is essential for instructional designers online instruction managers teachers academicians administrators researchers knowledge managers and students
