

A chemical equation is a representation of a chemical reaction in which the reactants are written using chemical formulas, followed by an arrow.

Reactants Products

A coefficient represents the number of atoms or molecules of a substance that are involved in a chemical reaction. A coefficient is placed directly in front of a chemical formula.

A subscript is placed after the element symbol to indicate the number of atoms of that element in a molecule.

Why is it important to balance chemical equations?

Chemical equations must be balanced because matter is conserved. The number of atoms of each element must be the same on both sides of the equation.

What does the law of conservation of mass state?

The law of conservation of mass states that matter cannot be created or destroyed in a chemical reaction.

Week 8, Day 2

The number of protons in an atom cannot change (it is fixed) but a different number of neutrons can change.

The number of electrons in an atom can change.

The most stable electron configuration has eight electrons in the outer shell (except for the first shell which has two electrons).

How does a positive ion form from a neutral atom? What is another name for a positive ion?

When an atom loses one or more electrons, it has more protons than electrons and is no longer neutral. This atom has a positive charge and is called a positive ion or cation.

How does a negative ion form from a neutral atom? What is another name for a negative ion?

When an atom gains one or more electrons, it has more electrons than protons and is no longer neutral. This atom has a negative charge and is called a negative ion or anion.

Atomic Structure

Atoms are made up of three particles: protons, neutrons, and electrons. Protons are positively charged, neutrons are neutral, and electrons are negatively charged.
