Physical Science Paper 1 November 2010 Memorandum:

The Secure and the Dispossessed Nick Buxton,Ben Hayes,2015-11-20 While the world's scientists and many of its inhabitants despair at the impact of climate change corporate and military leaders see nothing but opportunities. For them melting ice caps mean newly accessible fossil fuels borders to be secured from climate refugees social conflicts to be managed and more failed states in which to intervene. They are securing their assets at the expense of the planet and its inhabitants. The Secure and the Dispossessed looks at these deadly approaches with a critical eye. It also considers the flip side that the legitimacy of the elite is under unprecedented pressure from resistance by communities to resource grabs to those creating new ecological and socially just models for managing our energy food and water. Topics covered include geoengineering militarism refugee protection greenwashing and the agricultural crisis among others. Adaptation and resilience to a climate changed world is desperately needed but the form it will take will affect all of our futures.

Commons: Science and Technology Committee, 2010-03-18 Geoengineering describes activities specifically and deliberately designed to effect a change in the global climate with the aim of minimising or reversing anthropogenic climate change. The Committee gives three reasons why they believe regulation is needed: First, in the future some geoengineering techniques may allow a single country to unilaterally affect the climate; Second, some geoengineering testing is already underway; Third, we may need geoengineering in the event of a failure to reduce greenhouse gases we are faced with highly disruptive climate change. The Committee does not call for an international treaty but for the groundwork for regulatory arrangements to begin. The UN is the route by which eventually they envisage the regulatory framework operating but first the UK and other governments need to push geoengineering up the international agenda and get processes moving.

Law, Death, and

Robots Keri Grieman, 2024-10-17 Can the law keep up with AI? This book examines liability and regulation for artificial intelligence causing serious physical harm both now and in the future. While AI moves quickly, regulation follows more slowly, an increasing problem for an evolutionary fast-paced emerging technology. AI has the potential to save lives but in doing so will have the potential to take them as well. How do we future-proof law and regulation to incentivise life-saving innovation as safely as possible? This book details how to regulate AI in high-risk civil applications for example automated vehicles and medicine, addressing both liability and regulatory structure. It highlights crucial liability themes for technology governance, provides tools to bridge the gap between regulators and technologists, examines jurisdictional approaches to AI regulation in the EU, UK, USA, and Singapore, and ultimately suggests a jurisdiction agnostic blueprint for regulation.
