Reading Fluency Timothy Rasinski,William Rupley,David Paige,Chase Young,2021-01-21 Reading fluency has been identified as a key component of proficient reading Research has consistently demonstrated significant and substantial correlations between reading fluency and overall reading achievement Despite the great potential for fluency to have a significant outcome on students reading achievement it continues to be not well understood by teachers school administrators and policy makers The chapters in this volume examine reading fluency from a variety of perspectives The initial chapter sketches the history of fluency as a literacy instruction component Following chapters examine recent studies and approaches to reading fluency followed by chapters that explore actual fluency instruction models and the impact of fluency instruction Assessment of reading fluency is critical for monitoring progress and identifying students in need of intervention Two articles on assessment one focused on word recognition and the other on prosody expand our understanding of fluency measurement Finally a study from Turkey explores the relationship of various reading competencies including fluency in an integrated model of reading Our hope for this volume is that it may spark a renewed interest in

research into reading fluency and fluency instruction and move toward making fluency instruction an even more integral part of all literacy instruction

Improving Student Achievement David W. Grissmer, Ann Flanagan, Jennifer H. Kawata, Stephanie Williamson, Tom LaTourrette, 2000-07-19 Why do students have different achievement levels across states Is math achievement improving across states Differences in average achievement levels across states are mainly traceable to differing family characteristics However students from similar families also score differently across states These differences are related to differences in resource levels and in how resources are spent States with high spending per pupil lower pupil teacher ratios higher participation in public prekindergarten and higher reported teacher resources have higher achievement Disadvantaged children are the most sensitive to low resource and additional resources could substantially raise their scores Between state rather than within state differences in resources appear to be the main reason for inequitable resource levels for students of lower socioeconomic status The conclusion is that significant math gains are occurring across most states that cannot be traced to resource changes that the rate of gain varies significantly by state and that reform efforts are the likely cause of these gains The results certainly challenge the traditional view of public education as unreformable
