77 or revised High Altitude Robin Program is specifically designed for computer reduction of Robin flights which attain an
apogee of approximately 125 km and are tracked by an FPS 16 radar The program also provides accurate reduction for Robin
flights attaining other apogees between 65 and 150 km If a passive sphere other than the 1 m Robin approximately 115 g is
used reduction with this program is still possible There may be times however when drag coefficients are not available and
thus density temperature and pressure cannot be computed The time of fall test used to determine sphere collapse is not
used for spheres with dimensions that differ from the Robin At each second of flight the program calculates altitude wind
components and direction density temperature and pressure the RMS noise error in winds density temperature and pressure
