

The Russian Approach to Planning a Weightlifting Program

IN THE PAST, ELITE WEIGHTlifters (1, 2, 5, 6, 8, 14) based their weightlifting programs on the parameters of volume and intensity, the volume parameter being based on repetitions, sets of repetitions, and amount of weight (in kilograms) lifted per workout, microcycle, mesocycle, period of training, and years (6). Around 1970, however, coaches and trainers began using the number of repetitions when calculating the volume parameter in planning.

Saksonov attempted to find other parameters to control the volume of training (11, 12). He argued that tons and repetitions did not reflect the volume of training. Instead, he developed a new control system based on kilograms multiplied by the height of the lift. This control system was not readily accepted in weightlifting circles, however, due to the difficulty in calculating the volume, the varying heights of the weightlifters, and the fact that the system did not correlate with the various weightlifting exercises.

The intensity parameter in planning was based on the average possible weight that could be lifted per exercise, workout, mi-

crocycle, mesocycle, and period of training (6). Another way to plan the intensity parameter in a long period of training was through relative intensity (7), that is, intensity of training based on the athlete's best performance.

Bernshtein explains that the human body not only adapts to training but can also surpass the planned goals (3). The establishment of individualized short-term and long-term goals is critical in this new methodology of planning, as opposed to previous planning based on predetermined numbers of repetitions. The goals must reflect a new concept of weight training cycles when applied to weightlifting.

■ Traditional Versus New Concept of Planning

Traditional Planning

Traditionally, weightlifting programs were based on several factors:

- Distribution of volume per years based on repetitions per week
- Planning of weightlifting exercises per cycle of training

- Measurement of the volume and intensity per cycle of training and groups of exercises
- Planning of volume based on group of exercises in each training cycle
- Distribution of volume and intensity per 4-week training cycle
- Planning the number of repetitions between 90% and 100% in each month.

However, I consider the calculation of the number of repetitions to be neither a reliable nor accurate indication of one's potential in future weightlifting events.

New Method of Planning

The new method of planning weightlifting programs comprises four main points:

1. Yearly goals are based on competition results and fluctuations in weight, height, and other factors.
2. Training is cycled according to competitions and goals in each competition.

Russian Approach To Weightlifting:

Weightlifting Training and Biomechanics Andrew Charniga, 2019-12-04 Weightlifting Training and Biomechanics covers a gamut of training and technique from the perspective of Soviet era sport science to modern radical departures in theory of biomechanics Can There Be Such A Thing As An Asian Pull Equilibrium in Weightlifting The Foot the Ankle Joint and Asian Pull Asian pull technique is in all probability an effort to circumvent gravity by finding the path of least resistance for the body's movements which means these movements need not be designed to raise body center of mass as high as possible as in the Russian pull before squatting under the barbell The Asian pull technique is antithetical to Russian protocols which stipulate the lifter remain flat footed as trunk and thighs straighten in unison during the explosion phase see figure 3 Much of the explosion phase of the Asian pull is carried out with shoulder joints behind the vertical line of the bar with heels raised as legs straighten Peculiarities of balance equilibrium and stability are not unique to weightlifting In point of fact they can even be considered normal aberrations in athletics given the extraordinary complexity of the human body's movement possibilities Furthermore the high incidence of injuries in American sport can be traced to a catastrophic outcome of strength and conditioning training therapeutics and the like where an athlete's movements are choreographed to conform to rigid arbitrarily conceived limitations especially linear Charniga 2015 2017 Five articles have appeared in the EWF Science journal with another two awaiting publication [Weightlifting Titans](#) Ava Thompson, AI, 2025-01-11 Weightlifting Titans presents a fascinating journey through the evolution of competitive weightlifting masterfully weaving together the stories of legendary athletes with the scientific principles that revolutionized the sport From Vasily Alekseyev's groundbreaking 500 pound clean and jerk in 1970 to the incredible feats of Naim Süleymanoğlu the book examines how these remarkable athletes pushed the boundaries of human strength while transforming training methodologies and competitive techniques The narrative skillfully balances technical analysis with compelling biographical storytelling exploring how weightlifting evolved from basic strength work to sophisticated periodization programs Through extensive research including Olympic archives competition records and firsthand accounts from champions and coaches readers gain unprecedented insight into the physical and mental elements that created these athletic legends The book particularly shines in its examination of how sports science biomechanics and nutrition have influenced modern training methods Drawing from verified records and documented training approaches this comprehensive work serves both as a historical document and a practical resource for strength enthusiasts The text progresses chronologically while examining three core elements scientific principles historical development of techniques and detailed profiles of record setting athletes This approach makes complex concepts accessible while maintaining the accuracy and depth that serious sports enthusiasts and historians demand *Entrenamiento de fuerza y explosividad para la actividad física y el deporte de competición* Vicente Ortiz Cervera, 1999 Este libro ha buscado recopilar los distintos aspectos que dentro del campo de la fuerza y la explosividad pueden ayudar a los profesionales en la

A De-Masculinization of Strength Andrew Charniga, 2020-05-05 Introduction to A De Masculinization of Strength Andrew Charniga Sportivnypress com A De Masculinization of Strength is one of a kind in depth analysis of the evolution of the elite female weightlifter Beginning with progress of the female world records relative to those of the men since the introduction of world weightlifting championships for women in 1987 social physiological and psychological factors involved in the achievements are covered Considerable incite is offered into the how and why female lifters have overcome social psychological barriers to achieve high results in male dominated realm of strength The psychotropic quality of aggressiveness is a natural peculiarity of the male weightlifter in response to the ascending weight of the barbell Sport scientists Medvedyev RUS 1999 and CAO CHN 1993 both believe the female weightlifter s ability to accommodate this massive training load is because the female organism has low levels of testosterone It is more common knowledge than common application that exercises requiring high power necessitate performance against a backdrop of overall relaxation the male weightlifter is not as capable of performing a complex speed strength skill exercise like the clean and jerk as efficiently as the female weightlifter due to the male s reliance on pyramiding levels of aggressiveness to perform this exercise The psychotropic quality of aggressiveness is a natural peculiarity o the male weightlifter in response to the ascending weight of the barbell Relaxed straining would seem to be an oxymoron The East German sports science authorities decided to administer testosterone as well as dihydrotestosterone by nasal spray especially in those events in which the psychotropic effects of testosterone such as increased aggressiveness are considered important as well as to evade doping tests Franke Berendonk 1997 extensive observations over a period of many years many top female lifters are able to perform the jerk from the chest even after a very fatiguing clean precisely because they lack this quality of aggressiveness i e the overzealous impulsiveness which inhibits the ability to switch effectively from a simpler power movement in order to
