Protein Interaction Networks in Health and Disease Spyros Petrakis, Miguel A.

Andrade-Navarro, 2016-10-19 The identification and mapping of protein-protein interactions (PPIs) is a major goal in systems biology. Experimental data are currently produced in large scale using a variety of high throughput assays in yeast or mammalian systems. Analysis of these data using computational tools leads to the construction of large protein interaction networks which help researchers identify novel protein functions. However, our current view of protein interaction networks is still limited and there is an active field of research trying to further develop this concept to include important processes: the topology of interactions and their changes in real time; the effects of competition for binding to the same protein region; PPI variation due to alternative splicing or post-translational modifications etc. In particular, a clinically relevant topic for development of the concept of protein interaction networks is the consideration of mutant isoforms which may be responsible for a pathological condition. Mutations in proteins may result in loss of normal interactions and appearance of novel abnormal interactions that may affect a protein's function and biological cycle. This Research Topic presents novel findings and recent achievements in the field of protein interaction networks with a focus on disease. Authors describe methods for the identification and quantification of PPIs; the annotation and analysis of networks considering PPIs and protein complexes formed by mutant proteins associated with pathological conditions or genetic diseases. Vera Murgul, Zdenka Popovic, 2017-12-19 This book includes the proceedings of the 19th International Scientific Conference Energy Management of Municipal Transportation Facilities and Transport EMMFT 2017 which was held in Khabarovsk, Russia, on 10-13 April 2017. The book presents the research findings of scientists working at universities in the Far Eastern Siberian and Ural Federal Districts of Russia and of Serbia, which are unique regions notable for sustainably operating complex transport infrastructures in severe climatic and geographic environments. It also offers practical insights into transportation operation under such conditions. The book discusses the experiences of colleagues from Slovenia, Ukraine and Latvia in the development of transport infrastructure and construction of transport facilities and features and includes the results of a wide range of studies such as managing multimodal transportation, improving the efficiency of locomotives, electric locomotives, traction substations, electrical substations, relay protection and automation devices and power factor correction units. It addresses topics like renewable energy sources, problems of the mathematical and simulation modelling of electromagnetic processes of electrical power objects and systems, aspects of cost reduction for fuel and power resources, theoretical aspects of energy management, development of transport infrastructure, modern organizational and technological solutions in construction, new approaches in the field of management analysis and monitoring in transport sector. Comprising 142 high quality articles covering a wide range of topics, these proceedings are of interest to anyone engaged in transport engineering, electric power systems, energy management, construction and operation of transport infrastructure, buildings and

facilities **Exploring Evidence for Neurorehabilitation Advancements** Hideki Nakano,Masahiro Sakita,Kosuke Oku,Tomotaka Ito,Akiyoshi Matsugi,2025-08-12 Neuroscience based rehabilitation is called neurorehabilitation Specifically neurorehabilitation is defined as concepts evaluation methods treatments and equipment that apply brain theories and other findings revealed by neuroscience and related research to rehabilitation Physical dysfunction including central nervous system disease alters the body s representation in the brain resulting in stagnation of motor function recovery Therefore neuroscience based rehabilitation is essential to reconstruct the altered body representation in the brain However the evidence for neurorehabilitation is still insufficient and it is critical to build upon this evidence to provide optimal rehabilitation and maximize motor function recovery Many fundamental studies on neuroplasticity motor control and motor learning theory brain function measurement non invasive brain stimulation and advanced technologies such as brain machine interface AI and regenerative medicine have been reported in recent years The integration of neuroscience and cutting edge research related to neuroscience has excellent potential to contribute to the development of neurorehabilitation Role of Genetics and Epigenetics in Major Structural Malformations Duan Ma,Desheng Liang,Weinian Shou,Richard Q. Lu,Qihua Fu,2022-11-07 Hair Follicle Stem Cell Regeneration in Aging Mingxing Lei,Sung-Jan Lin,Cheng Ming Chuong,2022-01-18 Molecular mechanisms of cellular stress responses in cancer and their therapeutic implications Megan Chircop,Daniel Speidel,2015-03-06 In response to stress cells can activate a myriad of signalling pathways to bring about a specific cellular outcome including cell cycle arrest DNA repair senescence and apoptosis This response is pivotal for tumour suppression as all of these outcomes result in restriction of the growth and or elimination of damaged and pre malignant cells Thus a large number of anti cancer agents target specific components of stress response signalling pathways with the aim of causing tumour regression by stimulating cell death However the efficacy of these agents is often impaired due to mutations in genes that are involved in these stress responsive signalling pathways and instead the oncogenic potential of a cell is increased leading to the initiation and or progression of tumourigenesis Moreover these genetic defects can increase or contribute to resistance to chemotherapeutic agents and or radiotherapy Modulating the outcome of cellular stress responses towards cell death in tumour cells without affecting surrounding normal cells is thus one of the ultimate aims in the development of new cancer therapeutics To achieve this aim a detailed understanding of cellular stress response pathways and their aberrations in cancer is required This Research topic aims to reflect the broadness and complexity of this important area of cancer research **Cinnamon** Ranjith Senaratne,Ranjith Pathirana,2021-01-25 Cinnamon is the common name for the spice obtained from the dried inner bark of several species of the genus Cinnamomum in the Lauraceae family In world trade Cinnamomum cassia L J Presl Cinnamomum burmannii dominate but it is of a different quality to true or Ceylon cinnamon produced from Cinnamomum zeylanicum Blume C verum J Presl with the latter much easier to process giving a more delicate sweeter flavor with nuances of clove but more importantly with only traces often below detection thresholds of coumarin
