Gaither's Dictionary of Scientific Quotations Carl C. Gaither, Alma E. Cavazos-Gaither, 2008-01-08 Scientists and other keen observers of the natural world sometimes make or write a statement pertaining to scientific activity that is destined to live on beyond the brief period of time for which it was intended This book serves as a collection of these statements from great philosophers and thought influencers of science past and present It allows the reader quickly to find relevant quotations or citations Organized thematically and indexed alphabetically by author this work makes readily available an

unprecedented collection of approximately 18 000 quotations related to a broad range of scientific topics **Forensic Practitioner's Guide to the Interpretation of Complex DNA Profiles** Peter Gill, Øyvind Bleka, Oskar Hansson, Corina Benschop, Hinda Haned, 2020-06-10 Over the past twenty years there has been a gradual shift in the way forensic scientists approach the evaluation of DNA profiling evidence that is taken to court Many laboratories are now adopting probabilistic genotyping to interpret complex DNA mixtures However current practice is very diverse where a whole range of technologies are used to interpret DNA profiles and the software approaches advocated are commonly used throughout the world Forensic Practitioner's Guide to the Interpretation of Complex DNA Profiles places the main concepts of DNA profiling into context and fills a niche that is unoccupied in current literature The book begins with an introduction to basic forensic genetics covering a brief historical description of the development and harmonization of STR markers and national DNA databases The laws of statistics are described along with the likelihood ratio based on Hardy Weinberg equilibrium and alternative models considering sub structuring and relatedness The historical development of low template mixture analysis theory and practice is also described so the reader has a full understanding of rationale and progression Evaluation of evidence and statement writing is described in detail along with common pitfalls and their avoidance The authors have been at the forefront of the revolution having made substantial contributions to theory and practice over the past two decades All methods described are open source and freely available supported by sets of test data and links to web sites with further information This book is written primarily for the biologist with little or no statistical training However sufficient information will also be provided for the experienced statistician Consequently the book appeals to a diverse audience Covers short tandem repeat STR analysis including database searching and massive parallel sequencing both STRs and SNPs Encourages dissemination and understanding of probabilistic genotyping by including practical examples of varying complexity Written by authors intimately involved with software development training at international workshops and reporting cases worldwide using the methods described in this book *A New Writing Classroom* Patrick Sullivan, 2014-07-15 In *A New Writing Classroom* Patrick Sullivan provides a new generation of teachers a means and a rationale to reconceive their approach to teaching writing calling into question the discipline's dependence on argument Including secondary writing teachers within his purview Sullivan advocates a more diverse exploratory and flexible approach to writing activities in grades six through thirteen *A New Writing Classroom* encourages teachers to pay more attention to research in learning theory transfer of learning international models for nurturing excellence in the classroom and recent work in listening to teach students the sort of dialogic stance that leads to higher order thinking and more sophisticated communication The conventional argumentative essay is often a simplistic form of argument widely believed to be the most appropriate type of writing in English classes but other kinds of writing may be more valuable to students and offer more important kinds of cognitive challenges Focusing on listening and dispositions or habits of mind as central elements of this new composition pedagogy A

New Writing Classroom draws not just on composition studies but also on cognitive psychology philosophy learning theory literature and history making an exciting and significant contribution to the field

Differentiation Made Simple Mary Ann Carr,2021-09-03 Differentiation is a practice that is beneficial to every student Rather than focusing on leaving no child behind differentiation aims to move every child ahead The trouble for many teachers is however that differentiating for all students can be time consuming Differentiation Made Simple will help classroom teachers overcome time constraints and other obstacles to differentiation by providing a wealth of ready made and generic tools they can employ right away The tools include task cards for literature creative writing and research tic tac toe menus graphic organizers and guides to creating differentiated units each one tied to specific questions and concerns teachers have about differentiating instruction Also included are product lists and other assessment ideas including rubrics and a scoring conversion table Written especially for teachers in the trenches Differentiation Made Simple will help unlock the door to creating a classroom where every child is challenged by work appropriate for his or her abilities interests and learning styles

Causing Actions Paul M. Pietroski,2002 Thoughts often cause deeds Actions are done for reasons But do actions and their mental causes also have descriptions that do not involve reasons

Various considerations can make it seem that human mental events must be biochemical events Paul Pietroski however defends a non Cartesian form of dualism Actions and their rationalizing causes belong to an autonomous mental domain although this autonomy is compatible with the supervenience of the mental on the non mental On this view some bodily motions have rationalizing causes distinct from any biochemical causes Pietroski argues that this is not an objectionable form of overdetermination Central to his account is his proposed treatment of ceteris paribus laws their role in explanation and how such laws are related to singular causal claims Pietroski also connects these issues to semantic questions arising from discussions of action reports and belief ascriptions All philosophers interested in mind or causation will be intrigued by his new theory
