

# Study Guide: Physical and Chemical Oceanography

## Effective composition of seawater is determined by:

- 1) Primary salinity - given entirely by composition of waters which formed initial seawater during cooling, condensation, evaporation, crystallization of solids, precipitation
- 2) Evaporation - water moving through salt to lower, from atmosphere following atmospheric rules, and no moving substances, resulting increased saltiness and all chemical substances
- 3) Biological processes - phytoplankton, zooplankton, bacteria, fungi, etc. which change and exchange, metabolize, etc. and cause small but known amount of change

## Effective salinity and composition in reality:

- 1) Evaporation - water evaporates, increases weight
- 2) Condensation - water condenses from air, decreases weight, increases salinity

## How temperature and salinity produce density, water volume, negative expansion:

### Temperature differences alone cause density:

- 1) warm water takes about 1000 kg/m<sup>3</sup>, cold water is more dense
- 2) warm, less dense water is floating on a colder, denser water surface
- 3) when the temperature difference persists, the water becomes so different to be the stratified

### Salinity differences cause density:

- 1) water takes at least 1000 kg/m<sup>3</sup>, the denser water is more dense
- 2) water with higher salinity, and lower density, floats above of water with higher salinity
- 3) density (mass) increases as salinity increases (the denser substance)
- 4) the higher the salinity, the more it is difficult to change its volume as the temperature changes

### Evaporation:

How water moves and how it is affected by the atmosphere is also critical.

### Evaporation effects:

on the Earth, water, and the atmosphere, and the ocean.

Evaporation effects: - the evaporation is highest when the water is warm, and the atmosphere is dry.

Evaporation effects: - the evaporation is highest when the water is warm, and the atmosphere is dry.

Evaporation effects: - the evaporation is highest when the water is warm, and the atmosphere is dry.
