The Space Science Decadal Surveys National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Survey of Surveys: Lessons Learned from the Decadal Survey Process, 2015-10-28 The National Research Council has conducted 11 decadal surveys in the Earth and space sciences since 1964 and released the latest four surveys in the past 8

years The decadal surveys are notable in their ability to sample thoroughly the research interest aspirations and needs of a scientific community Through a rigorous process a primary survey committee and thematic panels of community members construct a prioritized program of science goals and objectives and define an executable strategy for achieving them These reports play a critical role in defining the nation s agenda in that science area for the following 10 years and often beyond The Space Science Decadal Surveys considers the lessons learned from previous surveys and presents options for possible changes and improvements to the process including the statement of task advanced preparation organization and execution This report discusses valuable aspects of decadal surveys that could taken further as well as some challenges future surveys are likely to face in searching for the richest areas of scientific endeavor seeking community consensus of where to go next and planning how to get there The Space Science Decadal Surveys describes aspects in the decadal survey prioritization process including balance in the science program and across the discipline balance between the needs of current researchers and the development of the future workforce and balance in mission scale smaller competed programs versus large strategic missions

the connected Sun Earth system and enhance greatly the capability to provide realistic and specific forecasts of Earth's space environment that will better serve the needs of society. Although the recommended program is directed primarily at NASA and the National Science Foundation for action, the report also recommends actions by other federal agencies, especially the parts of the National Oceanic and Atmospheric Administration charged with the day to day operational forecast of space weather. In addition to the recommendations included in this summary, related recommendations are presented in this report.

A Performance Assessment of NASA's Heliophysics Program National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Heliophysics Performance Assessment, 2009-04-24

Since the 1990s the pace of discovery in the field of solar and space physics has accelerated largely owing to NASA investments in its Heliophysics Great Observatory fleet of spacecraft. These enable researchers to investigate connections between events on the Sun and in the space environment by combining multiple points of view. Recognizing the importance of observations of the Sun to Earth system, the National Research Council produced a solar and space physics decadal survey in 2003 laying out the Integrated Research Strategy. This strategy provided a prioritized list of flight missions plus theory and modeling programs that would advance the relevant physical theories, incorporate those theories in models that describe a system of interactions between the Sun and the space environment, obtain data on the system and analyze and test the adequacy of the theories and models. Five years later, this book measures NASA's progress toward the goals and priorities laid out in the 2003 study. Unfortunately, very little of the recommended priorities will be realized before 2013. Mission cost growth, reordering of survey mission priorities, and unrealized budget assumptions have delayed nearly all of the recommended NASA spacecraft missions. The resulting loss of synergistic capabilities in space will constitute a serious impediment to future progress.

Landsat and Beyond National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Implementation of a Sustained Land Imaging Program, 2014-01-03

In 1972, NASA launched the Earth Resources Technology Satellite (ERTS), now known as Landsat 1, and on February 11, 2013, launched Landsat 8. Currently, the United States has collected 40 continuous years of satellite records of land remote sensing data from satellites similar to these. Even though this data is valuable to improving many different aspects of the country, such as agriculture, homeland security, and disaster mitigation, the availability of this data for planning our nation's future is at risk. Thus, the Department of the Interior's DOI's U.S. Geological Survey (USGS) requested that the National Research Council's NRC's Committee on Implementation of a Sustained Land Imaging Program review the needs and opportunities necessary for the development of a national space-based operational land imaging capability. The committee was specifically tasked with several objectives, including identifying stakeholders and their data needs and providing recommendations to facilitate the transition from NASA's research-based series of satellites to a sustained USGS land imaging program. *Landsat and Beyond: Sustaining and Enhancing the Nation's Land Imaging Program* is the result of the committee's investigation. This

investigation included meetings with stakeholders such as the DOI NASA NOAA and commercial data providers The report includes the committee s recommendations information about different aspects of the program and a section dedicated to future opportunities
