Surgery must be kept dry and adequately ventilated at all times to eliminate exposure of airborne materials, toxic hazards and improve the comfort of dental staff and patients. Temperature, humidity air-conditioning, and ventilation systems are regularly maintained/checked following HTM 03-01 specialised ventilation for healthcare premises guidance.

Natural light combination with Ambient lighting is used to establish a comfortable environment in a way that helps the patients feel confident and calm and helps to reduce their nervousness.

Clinical area equipment: all required equipment is turned and prepared for the treatment/procedure: compressor, X-ray Machine, dental chair, amalgamator, and the computer.

Decontamination room equipment:

I turned on the autoclave, the distilled water filter, the ultrasonic Bath and the extractor fan.

Clinical/surgery room:

I disinfected flat surfaces, the dental chair and applied disposable covers/protective barriers to the dental chair handles and headrest, light handles, dental chair control panel and X-ray machine head cover. Disposable syringe sleeves are used to cover High-speed handpiece, Contra-angle handpiece and 3 in 1 syringe. Computer keyboard, mouse is covered with disposable cling film.

Disposable covers/protective barriers are changed between patients to control and to reduce viral cross-contamination.

Water lines:

I fitted a reservoir bottle back with freshly made distilled water and removed instruments handpieces and placed all water consuming instruments into the flushing holder; syringes into their specific openings and flushed water lines for 2 minutes in order to reduce the level of micro-organisms and bacteria growth in DUWLs lines (Dental Unit Waterlines).
