methods of heating of no less importance has taken place in another direction viz in chemical and metallurgical operations including those with both ferrous and non ferrous metals for the production of heat at temperatures which are well within the range of ordinary fuel heating methods About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

The Electric Furnace Alfred Stansfield, 2015-06-16 Excerpt from The Electric Furnace Its Construction Operation and Uses On my first visit to Canada in 1897 I constructed an electric furnace and showed it in operation at a lecture on Canada's metals which was delivered by the late Sir William Roberts Austen The application of electrical heat to Metallurgy has always interested me greatly and I hope that this little book may serve to instil this interest in others and to help forward the application of electric smelting in a country which is so rich in water powers and mineral resources This book originated in a series of papers written about a year ago for the Canadian Engineer in which I endeavored to present as simply as possible the principles on which the construction and use of the electric furnace depend and to give an account of its history and present development The original papers were written at a time when the experiments of Dr Haanel at Sault Ste Marie were attracting public attention and a large section of the book has been devoted to the consideration of these and other advances in the electrometallurgy of iron and steel I wish to thank all who have helped me in the preparation of this book including Dr Haanel whose valuable monographs have formed the basis of my chapter on iron and steel and to whom I am indebted for additional information on this branch of the subject Prof J W Richards who has taken an interest in my work and whose book on Metallurgical Calculations has been of considerable assistance in writing the chapter on furnace efficiencies Mr E A Colby who gave me information in regard to his induction steel furnace and a sketch for Fig 25 Mr Francis A J Fitzgerald who supplied me with the data for Table X the editor of the Electrochemical and Metallurgical Industry who loaned the block for the frontispiece and the International Acheson Graphite Company who gave me information about their furnaces and lent the block for Fig 40 I also wish to thank those of my personal friends who assisted me in the tedious work of proof reading About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections
