Peregrine Falcon Handbook Judith Reo, 2025-09-02 Introduction to Peregrine Falcons The peregrine falcon *Falco peregrinus* is one of the most remarkable birds of prey in the world renowned for its incredible speed exceptional hunting skills and adaptability to diverse environments Often referred to as the fastest bird on Earth the peregrine falcon has captured the imagination of humans for centuries both as a symbol of power and as a highly skilled hunter whose presence is felt across every continent except Antarctica This chapter serves as a comprehensive introduction to this awe inspiring species examining its biology physical adaptations and the historical and cultural significance it holds in human society Overview of the Species The peregrine falcon is a member of the family Falconidae which includes all falcons caracaras and related raptors It is widely distributed inhabiting regions ranging from the Arctic tundra to tropical rainforests deserts coastal cliffs and even bustling urban landscapes This incredible adaptability is a testament to the species resilience enabling it to survive in habitats that are often hostile or heavily influenced by humans Peregrine falcons are highly migratory particularly those that breed in northern latitudes These birds undertake extensive seasonal migrations traveling thousands of kilometers to reach warmer climates during winter months This migratory behavior allows them to exploit seasonal prey populations ensuring survival in regions where food availability may fluctuate dramatically In tropical and temperate zones some populations are resident year round demonstrating flexibility in their lifestyle depending on ecological

conditions As apex aerial predators peregrine falcons primarily hunt medium sized birds such as pigeons doves songbirds and waterfowl They are renowned for their hunting technique known as the stoop where they dive from great heights at speeds exceeding 320 kilometers per hour 200 miles per hour to strike prey in mid air with astonishing precision This unparalleled hunting prowess positions the peregrine as one of the most efficient avian hunters in the natural world Peregrines are sexually dimorphic meaning that males and females differ in size with females typically 30% larger than males This size difference is thought to reduce competition between sexes for prey and to enhance reproductive success Despite the size disparity both males and females exhibit similar plumage characterized by slate blue to gray upperparts pale underparts with dark barring and a distinctive facial moustache mark that contrasts sharply with their otherwise pale face

Physical Characteristics and Adaptations The peregrine falcon's physical attributes are perfectly tuned for aerial hunting and survival in diverse habitats Understanding these characteristics provides insight into why the species is such an effective predator and why it has successfully colonized environments ranging from remote cliffs to urban skyscrapers

- 1 Size and Structure** Adult peregrines typically measure between 34 and 58 centimeters 13 to 23 inches in length with a wingspan ranging from 74 to 120 centimeters 29 to 47 inches Their compact muscular bodies are built for speed with long pointed wings that facilitate rapid efficient flight The tail is relatively short but powerful providing precise control and maneuverability during high speed pursuits
- 2 Plumage and Camouflage** Peregrine falcons possess plumage that serves both functional and adaptive purposes The slate gray to bluish back and wings provide camouflage when viewed from above blending with the sky or surrounding terrain The pale underparts streaked with dark barring help conceal the bird from prey when seen from below particularly during stoops

How many different species of falcon are there When were peregrines first used for hunting How fast can a peregrine fly Peregrine Falcon answers these and other questions including the wonderful question of how these birds were stopped from going down the road to extinction Often the increasing human population and its expanding cities crowd out wildlife In this book you will learn how big cities played a role in helping these birds *Peregrine Falcon* Natalie Lunis, 2010-08-01

Green, William Reynolds Sanford, 1986 Describes the physical characteristics habitat behavior and life cycle of this small bird of prey and briefly examines the sport of falconry [Peregrine Spring](#) Nancy Cowan, 2016-03-01 New York Times Bestseller Peregrine Spring Nancy Cowan's memoir of her thirty years living intimately with raptors gives us a new perspective on the relationship between humans and the natural world Cowan shares

her experiences running a world famous falconry school and the lessons she s learned from her birds From retrieving her falcon from the local police lock up to finding her husband in bed with a gyrfalcon to a heart breaking race to save her young peregrine from attack by a wild hawk Cowan s life is a constant ever changing adventure Cowan s birds have immersed her so much into their world that she has found herself courted by a Goshawk and bossed about by a Harris Hawk The book carries her readers along so they too meet hawks and falcons in ways they never imagined possible *Peregrine Falcon* James H. Enderson,2013-08-26 A superb success as a bird combining great speed aeronautical grace and fearlessness inhabitant of wild places inaccessible cliffs and skyscrapers worldwide dweller trans equatorial migrant and docile captive the peregrine falcon stands alone among all others of its kind Perhaps this is why so many varied people rushed to its aid when it faced decimation by pesticide poisoning In this personal and highly entertaining memoir Jim Enderson tells stories of a lifetime spent studying training breeding and simply enjoying peregrine falcons He recalls how his boyhood interest in raptors grew into an ornithological career in which he became one of the leading experts who helped identify DDT as the cause of the peregrine falcon s sudden and massive decline across the United States His stories reveal both the dedication that he and fellow researchers brought to the task of studying and restoring the peregrine and the hair raising adventures that sometimes befell them along the way Enderson also seamlessly weaves in the biology and natural history of the peregrine as well as anecdotes about its traditional and widespread use in falconry as an aggressive yet tractable hunter to offer a broad portrait of this splendid and intriguing falcon *Peregrine Falcon* Patrick Stirling-Aird,2012 A comprehensive introduction to the formidable winged hunter **Return of the Peregrine** Tom J. Cade,William A. Burnham,Pat Burnham,2003 The book is intended for a non scientific audience but does contain previously unpublished information tables and graphs plus an extensive literature cited section and a bibliography for Eastern and Midwestern Peregrine restoration publications from 1971 2000 *Peregrine Falcon Populations* Tom J. Cade,1988 **Peregrine Falcon** Donald Paul,2020-09-06 Peregrine falcons are famous for their speed in excess of 200 miles per hour and their ability to capture prey in mid flight That same speed and a preference for inaccessible roosting locations means they are effectively unseen in the wild They were not elusive enough however to avoid near extinction The Peregrine Falcon is a quick flier averaging 40 55 km h 25 34 mph in voyaging flight and arriving at speeds up to 112 km h 69 mph in direct pursuit for prey During its fantastic chasing stoop from statures of more than 1 km 0 62 mi the peregrine may arrive at paces of 320 km h 200 mph as it drops toward its prey *Peregrine Falcon* ,1995 *Hunting Tactics of Peregrines and Other Falcons* Dick Dekker,2009 This dissertation describes the foraging habits and capture rates of four species of bird hunting falcons Peregrine Falco peregrinus Merlin Falco colum barius Gyrfalcon Falco rusticolus and Prairie Falcon Falco mexicanus Eight of the nine study areas were situated in western Canada in widely different habitats and the observation periods intermittently included all seasons over 44 years 1965 2008 The various chapters report and compare the location specific hunting methods and choice

of prey of these falcons in the following scenarios 1 Migrating Peregrines hunting waterbirds at Beaverhills Lake a large wetland in central Alberta 2 Migrating Peregrines and Merlins capturing small shore birds and passerines at Beaverhills Lake 3 Breeding Peregrines that launched their hunts from the high chimneys of an industrial powerplant by a large Alberta lake and selectively took gulls 4 Marine Peregrines nesting on Pacific island cliffs and preying on seabirds 5 Peregrines and other raptors hunting wintering Dunlins *Calidris alpina* and ducks at Boundary Bay on the Pacific coast of British Columbia 6 Peregrines specializing on teal and American Wigeon *Anas americana* wintering on coastal farmlands 7 Territorial pairs of Peregrines and Prairie Falcons competing for prey and nest sites on a sympatric breeding range along an Alberta river 8 Prairie Falcons and Gyr falcons wintering in the city of Edmonton and capturing Rock Doves *Columba livia* 9 Gyrfalcons hunting Mallards *Anas platyrhynchos* wintering on Alberta farmlands 10 Klepto parasitic interference from eagles and buteo hawks with hunting Peregrines and Gyrfalcons and intra and interspecific prey theft between falcons The largest set of data pertains to the Peregrine which was studied in all seasons and habitats except during winter in central Alberta In addition this thesis reports on the population dynamics and nest site competition between Peregrines and Prairie Falcons on a sympatric breeding range in Alberta over a span of 48 years The Peregrine became extirpated during the 1960s Large scale efforts to reintroduce the species in the 1990s seemed initially successful resulting in seven new breeding pairs but they dwindled to one while the Prairie Falcons continued to do well The first chapter of the thesis details 15 years of Peregrine migrations at a large lake in central Alberta and the last chapter analyses the fall passage and hunting habits of Peregrines along the Wadden Sea coast of the Netherlands There the specific research question was whether or not Dunlins wintering on the Dutch coast would engage in over ocean flocking manoeuvres during high tides that inundate all mudflat habitats The phenomenon proved to be very rare and the probable reasons are discussed in detail
