Mathematical Tools for Real-World Applications Alexandr Draganov, 2022-08-02 Techniques for applying mathematical concepts in the real world six rarely taught but crucial tools for analysis research and problem solving Many young graduates leave school with a solid knowledge of mathematical concepts but struggle to apply these concepts in practice Real scientific and engineering problems are different from those found in textbooks they are messier take longer to solve and standard solution recipes might not apply This book fills the gap between what is taught in the typical college curriculum and what a practicing engineer or scientist needs to know It presents six powerful tools for analysis research and problem solving in the real world dimensional analysis limiting cases symmetry scaling making order of magnitude estimates and the method of successive approximations The book does not focus on formulaic manipulations of equations but emphasizes analysis and explores connections between the equations and the application Each chapter introduces a set of ideas and techniques and then shows how these techniques apply to a series of problems Knowledge of algebra and trigonometry but not calculus is required The final two chapters tie all six techniques together and apply them to two real world problems computing the probability of a rare catastrophic event and tracking a satellite with a GPS receiver Readers will learn how to analyze dissect and gain insight into the results by using all the techniques presented in earlier chapters and discover how analysis tools work on problems not concocted for a textbook The appendix provides solutions to many of the problems found throughout the book Alexandr Draganov was born and raised in Kyiv Ukraine in light of the current war

in Ukraine he will donate 100% of his royalties for the first year to support medical and humanitarian efforts there

Learning and Teaching Real World Problem Solving in School Mathematics Murad Jurdak, 2016-05-30 The ultimate aim of this book is to identify the conceptual tools and the instructional modalities which enable students and teachers to cross the boundary between school mathematics and real world problem solving The book identifies examines and integrates seven conceptual tools of which five are constructs activity theory narrative modeling critical mathematics education ethnomathematics and two are contexts STEM and the workplace The author develops two closely linked multiple perspective frameworks one for learning real world problem solving in school mathematics which sets the foundations of learning real world problem solving in school mathematics and one for teaching real world problem solving in school mathematics which explores the modalities of teaching real world problem solving in school mathematics The book is composed as on the one hand a high level theoretical scholarly work on real world problem solving in school mathematics and on the other hand a set of twelve narratives which put together constitute a thought provoking and moving personal and professional autobiography Mogens Niss These narratives combine aspects of Murad s personal trajectory as an individual with those points in his professional career at which he became aware of perspectives on and approaches to mathematics education that were both significant in and of themselves and instrumental for the specific scholarly endeavor presented in the book Mogens Niss

Multiobjective Optimization Jürgen Branke, 2008-10-15 Multiobjective optimization deals with solving problems having not only one but multiple often conflicting criteria Such problems can arise in practically every field of science engineering and business and the need for efficient and reliable solution methods is increasing The task is challenging due to the fact that instead of a single optimal solution multiobjective optimization results in a number of solutions with different trade offs among criteria also known as Pareto optimal or efficient solutions Hence a decision maker is needed to provide additional preference information and to identify the most satisfactory solution Depending on the paradigm used such information may be introduced before during or after the optimization process Clearly research and application in multiobjective optimization involve expertise in optimization as well as in decision support This state of the art survey originates from the International Seminar on Practical Approaches to Multiobjective Optimization held in Dagstuhl Castle Germany in December 2006 which brought together leading experts from various contemporary multiobjective optimization fields including evolutionary multiobjective optimization EMO multiple criteria decision making MCDM and multiple criteria decision aiding MCDA This book gives a unique and detailed account of the current status of research and applications in the field of multiobjective optimization It contains 16 chapters grouped in the following 5 thematic sections Basics on
