**XaaS: Everything-as-a-service - The Lean And Agile Approach To Business Growth** Shantanu Bhattacharya, Lipika Bhattacharya, 2021-10-13 XaaS Everything as a Service The Lean and Agile Approach to Business Growth takes the reader into the bold new world of pay per use for a product or service From the perspective of the customer the servitization model yields multiple benefits the

consumer can try out the product service at a relatively low cost the risk is mitigated capital expenses can be converted into operating expenses it is not needed to forecast how often the product service is used and only parts of the product service needed can be used Similarly a provider can benefit by having a larger market coverage steadier stream of revenues upgrades as and when needed sharing of fixed assets across consumers practicing of value based pricing and unbundling or bundling utility for consumers using appropriate pricing techniques However this nanoization of products services is tricky and has to be designed carefully This book provides a set of recipes to providers to adopt the XaaS model by changing the provider s mindset dividing the product service forces the provider to take a value driven approach to his product service and consequently eliminate all non value added activities The requirements of the XaaS model serve both as an objective to the innovation and internal processes of the provider and as guide to understanding the customer s needs The book also covers data acquisition data analysis and synthesis and data application needs of the XaaS model with simple examples and case studies from the business world of firms that achieve these objectives successfully

Program Detroit Symphony Orchestra,1926 *Federal Register* ,2012-08 Reliability, Maintenance and Logistic Support U Dinesh Kumar,John Crocker,J. Knezevic,M El-Haram,2012-12-06 Reliability Maintainability and Supportability play a crucial role in achieving a competitive product While manufacturing costs are important for the success of a product they are not the sole domains in realizing its competitive edge Improved manufacturing and operating quality and performance coupled with reduced acquisition cost and in service cost of ownership are important in achieving business success It is the early phase of design which offers the greatest opportunity to address these requirements and thus create life cycle effectiveness The main objective of Reliability Maintenance and Logistic Support A Life Cycle Approach is to provide an integrated approach to reliability maintainability maintenance and logistic support analysis We not only look at the ways we can improve the design process to ensure the product offers value for money but we also consider how the owners can get the most from these products once they have entered service The approach provides a meaningful way of integrating reliability maintenance and supportability to enhance the product performance and sales opportunities Hence the book covers the following objectives 1 Introduce the concepts of reliability maintainability and supportability and their role in the system life cycle and effectiveness 2 Introduce the basic probability and statistical techniques that are essential for modelling reliability maintainability and supportability problems 3 Introduce reliability measures how to predict them how to determine from in service real world data how to use them 4 Analysis of advanced models in Reliability 5 Discuss basic and advanced concepts in both maintainability and maintenance including preventive corrective and condition based maintenance 6 Discuss maintenance management and optimization concepts such as reliability centered maintenance and age related maintenance 7 Provide basic concepts in supportability and Integrated logistic support 8 Discuss techniques for design for reliability maintainability and supportability 9 Analysis of simple and advanced models in spares forecasting and optimization 10 Discuss data analysis data management and data mining techniques Transforming logistics support for fast jets Great Britain: National Audit Office,2007-07-17 Since 2003 the Ministry of Defence MoD has changed its arrangements for providing logistics support for its Harrier and Tornado fast jet aircraft by rationalising the activity and location of its

maintenance and repair services The NAO report finds that these changes have reduced costs by a cumulative saving of 1.4 billion and although availability of the aircraft temporarily declined during the transition period availability targets for these fast jet aircraft are now being met The MoD has applied new techniques including introducing pulse lines similar to a production line used in the motor car industry which has led to improved productivity with fewer man hours and less workspace and spares holdings The MoD has also entered into new partnerships with industry which are managed by teams made up of contractors and military personnel situated at main RAF bases The new arrangements are based on industry making available a specified number of aircraft or engines rather than on the number of repairs they carry out or the number of spare parts they provide The report identifies two significant risks that still remain relating to the provision of sufficient trained personnel to man the pulse lines for both jets and the supply chain to ensure the timely supply of spare parts for both types of aircraft
