**Alternatives to Animal Use in Research, Testing, and Education** , 1986 *Considering Animals* Dr Carol Freeman, Dr Elizabeth Leane, Ms Yvette Watt, 2013-07-28 *Considering Animals* draws on the expertise of scholars trained in the biological sciences humanities and social sciences to investigate the complex and contradictory relationships humans have with nonhuman animals Taking their cue from the specific animal moments that punctuate these interactions the essays engage with contemporary issues and debates central to human animal studies the representation of animals the practical and ethical issues inseparable from human interactions with other species and perhaps most challengingly the compelling evidence that animals are themselves considering beings Case studies focus on issues such as animal emotion and human sentimentality the representation of animals in contemporary art and in recent films such as *March of the Penguins* *Happy Feet* and *Grizzly Man* animals experiences in catastrophic events such as Hurricane Katrina and the SARS outbreak and the

danger of overvaluing the role humans play in the earth's ecosystems From Marc Bekoff's moving preface through to the last essay *Considering Animals* foregrounds the frequent sometimes uncanny exchanges with other species that disturb our self-contained existences and bring into focus our troubled relationships with them Written in an accessible and jargon-free style this collection demonstrates that in the face of species extinction and environmental destruction the roles and fates of animals are too important to be left to any one academic discipline

[Bioethics in Singapore](#) John Elliott, W. Calvin Ho, Sylvia S. N. Lim, 2010 This book provides an analysis of the ways in which the BAC has established an ethical framework for biomedical research in Singapore following the launch of the Biomedical Sciences Initiative by the Singapore Government The editors and authors have an intimate knowledge of the working of the BAC and the focus of the book includes the ways in which international

forces have influenced the form and substance of bioethics in Singapore Together the authors offer a comparative account of the institutionalisation of biomedical research ethics in Singapore considered in the wider context of international regulatory efforts The book reviews the work of the BAC by placing it within the broader cultural social and political discourses that have emerged in relation to the life sciences since the turn of the 21st century This book is not primarily intended to be a retrospect or an appraisal of the contribution of the BAC though this is one aspect of it Rather the main intention is to make a substantive contribution to the rapidly emerging field of bioethics Ethical discussions in the book include consideration of stem cell research and cloning genetics and research with human participants and focus on likely future developments as well as the past Many of the contributors of the book have been personally involved in this work and hence they write with an authoritative first hand knowledge that scholars in bioethics and public policy may appreciate As indicated above the book also explains the way in which ethics and science international and local have interacted in a policy setting Scholars and policy makers may find the Singaporean experience to be a valuable resource as the approach has been to make the ethical governance of research in Singapore consistent with international best practice while observing the requirements of a properly localised application of universally accepted principles In addition at least three chapters the first three chapters in particular are accessible to the lay reader interested in the development of bioethics and biomedical sciences both inside and outside Singapore from 2000 the year in which the BAC was established Both scholars and interested lay readers are therefore likely to find this publication a valuable reference

**10 2 kinematics of rotational motion openstax** - Jul 17 2023

rotational kinematics just like linear kinematics is descriptive and does not represent laws of nature with kinematics we can describe many things to great precision but kinematics does not consider causes for example a large angular acceleration describes a very rapid change in angular velocity without any consideration of its cause

**equation overview for rotational kinematics problems** - Feb 12 2023

evaluate problem solving strategies for rotational kinematics just by using our intuition we can begin to see how rotational quantities like  $\theta$ ,  $\omega$  and  $\alpha$  are related to one another for example if a motorcycle wheel has a large angular acceleration for a fairly long time it ends up spinning rapidly and rotates through many revolutions
