Construction Safety Management, A Systems Approach Jose D.

Pérezgonzález, 2005 The few models on safety management that are available tend to explain a procedure to manage safety rather than a safety management system The research carried out here however models safety management by transforming a common procedural model i e the HSE s model 1997 into a functional systems representation The overall goal of the model is to offer clear graphic lines of influence of its different components on organisational safety The model is innovative not in the components that it considers but in the representation of those components which details relative distances between elements and therefore opens doors to model driven hypotheses which account for those distances Therefore hypotheses are more accurate in their predictions This model is firstly explored in the construction sector Results from this exploratory
