

Writing a scientific report

A scientific report should conform to the following general arrangement:

Title

Abstract

Introduction

Materials and Methods

Results

Discussion

References

The **TITLE** should clearly and briefly indicate what the report is about. The title is never a complete sentence, and articles (a, an, the) are usually omitted. Use maximal capitalisation.

The **ABSTRACT** should be no longer than 200 words and should include the main objectives, findings (i.e. results) and the conclusions. A reader should be able to grasp the full scope and significance of the work reported without having to read the entire report.

The **INTRODUCTION** discusses the theoretical background to the investigation and places the present work in context. Relevant references should be cited and the reader's attention moved from the general to the specific. The aims of the present study should be clearly stated at the end of the introduction.

The **MATERIALS AND METHODS** section should include all information required for an exact repetition of the work performed. Since you are reporting on work already done, it is customary to use the **PAST PASSIVE** tense. Compare the following:

PAST ACTIVE: We performed the experiment over three weeks.

PAST PASSIVE: The experiment was performed over three weeks.

The **methods** should not be written as instructions to the reader, nor presented as an itemised list. Subheadings may be appropriate. For work conducted in class, a reference to the appropriate practical manual may be enough in this section.

The **RESULTS** consist of data and some comment which draws attention to the most significant aspects of the results. The data are usually presented in tables or graphs, but do not present the data in more than one format. Any comment on the results should be quantitative, not just qualitative; that is, any comments should be backed up with data.

It is designed to provide practical information but also the most up to date research in neurobiological and neuroanatomical contributions of these disorders to inform the practitioner and enhance the care provided to their pediatric patients.

Research Methods in Psychology

Paul G. Nestor, Russell K. Schutt, 2018-10-05. The authors are proud sponsors of the 2020 SAGE Keith Roberts Teaching Innovations Award, enabling graduate students and early career faculty to attend the annual ASA pre conference teaching and learning workshop. *Research Methods in Psychology: Investigating Human Behavior* draws on fascinating stories to illustrate the entire research process within a unifying conceptual framework. Bestselling authors Paul G. Nestor and Russell K. Schutt present a clear and comprehensive introduction to the logic and techniques of research methods in psychology by employing a unique combination of two distinct yet complementary pedagogical techniques. First, chapters designed for experiential, hands-on studies put the student in the roles of researcher, participant and consumer to bring concepts to life. Second, the findings of cognitive science guide the text in a way that is most conducive to learning. This novel approach serves as an effective way to make the world of psychological research fun and rewarding for students, in addition to allowing them to gain the foundational knowledge they need to design, conduct and present research.

Science Education Research and Practice in Asia-Pacific and Beyond Jennifer Yeo, Tang Wee Teo, Kok-Sing Tang, 2017-10-16. This book is based on presentations at the International Science Education Conference (ISEC) 2014. It showcases a selection of the best papers by researchers and science teachers from the Asia Pacific region, North America and the United Kingdom. Centered on the theme of 'Pushing the boundaries: Investing in our future', they pursue new ways of helping learners appreciate the diversity and changes in science that result from a globalised world facing complex and diverse environmental and technological issues. The chapters touch on various themes in science education that explore and investigate issues of scientific literacy, societal challenges and affect, and teacher professional development. Its comprehensive themes make it a valuable textbook for graduate students of master's and Ph.D. programs. It also appeals to pre-service and in-service teachers as a resource on innovative pedagogical practices and creative methods of professional development. With a selection that emphasises the research-practice nexus in education research, it serves as an introductory handbook for teachers to connect with the current issues facing science education.
