What do you want to know about the alligator?

hard, bony plates on the alligator's skin

air holes the alligator breathes through

animals that hunt other animals

Animal Bites

An Inside Look at the American Alligator

A Face Only A Mother Could Love

Most alligators are between 8 and 11 feet long and can weigh up to 1,000 pounds! The skin on the back of an alligator is covered in hard plates, called scutes. This creates a skin like armor.

The alligator's head has a long snout and its nostrils are near the top of the snout. This allows the alligator to breathe air, even when it is mostly under the water.

The alligator has four, short legs with five toes on the front legs and four toes on the back legs. Even with short legs, it is fast. The alligator can run up to 11 miles an hour on land!

Here, Fluffy...

Don't feed it your snack. Don't put it on a leash and don't try to take it for a walk. This is definitely not a pet. It is the American Alligator.

It is All About Location

American Alligators can be found throughout the southern part of the United States, including Georgia, Florida, and Louisiana. They are most often found in fresh water. An alligator can be spotted in a slow moving river, lake, marsh, or swamp. Alligators are not usually found in salt water.

Matching: Connect

Directions: Match the words on the left with the definitions on the right. Write the letter of the correct definition in the box.

What's the Connection?

Many people believe that alligators are dangerous. They are not. They actually are very important to the ecosystem. They help keep the water clean and the land healthy.

Word	Definition
Scute	A hard, bony plate on the alligator's skin.
Nostril	An air hole on the alligator's snout.
Predator	An animal that hunts other animals.

Did you know?

- Alligators are the largest members of the crocodilian family.
- Alligators are found in the southern United States.
- Alligators are found in the Everglades.
