Juxtaposing "electronic book" and hard-copy books creates a useful framework for critically examining the computer's role in document production and presentation. Although electronic document systems are not directly comparable to paper books, the two nevertheless serve a number of common purposes. Both are used as sources of information, as learning devices, and as mechanisms for communication between people who are distant in time or place.

By considering the strengths and weaknesses of paper and electronic documents, it is possible to formulate a set of capabilities that electronic document systems should possess to maximize the advantages of the electronic medium and overcome some of the disadvantages inherent in the print medium. After outlining these general capabilities, the article describes four document systems developed or under development at Brown University that illustrate many of the different necessary functions.

Print medium

Scholars, or "knowledge workers," rely heavily on print media, even though electronic creation and dissemination of information is possible with today's technology. In some cases, this

reliance on print is part of a long, ingrained tradition, but in other cases, print is still simply the most appropriate vehicle, either because electronic document systems are not designed to use or because they do not meet a particular objective as well as does paper.

The most important fundamental property of books is that they are static. Once printed, a book cannot be altered except by reprinting, and at no time do readers have the opportunity to change or manipulate its contents. The static nature of books is both their biggest asset and their most serious shortcoming.

A review of the assets and shortcomings of books is helpful in establishing a list of capabilities essential for high-quality electronic documents systems (see Table 1 on the next page).

Electronic medium

Electronic document systems have their own advantages and limitations. In some cases they are more powerful or appropriate than paper books for meeting the range of information needs of scholars within the university community. In other cases, books are more useful.
