## MySQL Databases

MySQL Databases allow you to store lots of information in an easy to access manner. The databases themselves are not easily read by humans. MySQL databases are required by many web applications including some bulletin boards, content management systems, and others. To use a database, you'll need to create it. Only MySQL Users (different than mail or other users) that have privileges to access a database can read from or write to that database.

The book does not assume that the reader has a programming background. The content, by design, emphasizes the learning-by-doing approach. The scripting languages that are used in the text include HTML, VBScript, Visual Basic, and JScript. The text includes projects about database-driven websites, design of web forms, Ad Rotator implementations, and the creation of COM components. The projects also include the use of application and session objects, as well as cookies. You will study enough about ASP technology to understand what you are doing and will gain an understanding of ASP programming components by using them. After you complete the assignments in this book, you will be able to adapt many of them for your own website. The projects are designed to work with both Windows 98 and Windows 2000.
