and new functions toupper and tolower The CONVFM variable specifies the conversion format to use when converting numbers to strings awk used to use OFMT for this purpose The toupper and tolower functions each take a presumably mixed case string argument and return a new version of the string with all letters translated to the corresponding case In addition this edition covers GNU sed newly available since the first edition It also updates the first edition coverage of Bell Labs nawk and GNU awk gawk covers mawk an additional freely available implementation of awk and briefly discusses three commercial versions of awk MKS awk Thompson Automation awk tawk and Videosoft VSAwk Program Guide United States.
