MARS

THE ULTIMATE OUTDOOR VACATION

Named after the God of War... Mars is the fourth planet from the Sun just a mere 36 to 401 million km from earth. Taking off from beautiful Cape Canaveral FL, we would slingshot around the moon, fly using a new solar propelled system at speeds up to 1 million km per hour, reaching Mars in 3 days! Use this relaxing flight to learn more about living in low-gravity!

Mars Sample Return Mission James R. French, Douglas P. Blanchard, 1986 *Assessment of Mars Science and Mission Priorities* National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Planetary and Lunar Exploration, 2003-07-08 Within the Office of Space Science of the National Aeronautics and Space Administration NASA special importance is attached to exploration of the planet Mars because it is the most like Earth of the planets in the solar system and the place where the first detection of extraterrestrial life seems most likely to be made The failures in 1999 of two NASA missions Mars Climate Orbiter and Mars Polar Lander caused the space agency's program of Mars exploration to be systematically rethought both technologically and scientifically A new Mars Exploration Program plan summarized in Appendix A was announced in October 2000 The Committee on Planetary and Lunar Exploration COMPLEX a standing committee of the Space Studies Board of the National Research Council was asked to examine the scientific content of this new program This goals of this report are the following Review the state of knowledge of the planet Mars with special emphasis on findings of the most recent Mars missions and related research activities Review the most important Mars research opportunities in the immediate future Review scientific priorities for the exploration of Mars identified by COMPLEX and other scientific advisory groups and their motivation and consider the degree to which recent discoveries suggest a reordering of priorities and Assess the congruence between NASA's evolving Mars Exploration Program plan and these recommended priorities and suggest any adjustments that might be warranted **N A S A Activities** U.S. National Aeronautics and Space Administration, 1975 **NASA Activities** , 1976 Introduction to Mineralogy and Petrology Swapan Kumar Haldar, 2020-07-29 Introduction to Mineralogy and Petrology second edition presents the essentials of both disciplines through an approach accessible to industry professionals academic researchers and students alike This new edition emphasizes the relationship between rocks and minerals right from the structures created during rock formation through the economics of mineral deposits While petrology is classified on the lines of geological evolution and rock formation mineralogy speaks to the physical and chemical properties uses and global occurrences for each mineral emphasizing the need for the growth of human development The primary goal is for the reader to identify minerals in all respects including host rocks and mineral deposits with additional knowledge of mineral exploration resource extraction process and ultimate use To help provide a comprehensive analysis across ethical and socio economic dimensions a separate chapter describes the hazards associated with minerals rocks and mineral industries and the consequences to humanity along with remedies and case studies New to the second edition includes coverage of minerals and petrology in extra terrestrial environments as well as case studies on the hazards of the mining industry Addresses the full scope of core concepts of mineralogy and petrology including crystal structure formation and grouping of minerals and soils definition origin structure and classification of igneous sedimentary and metamorphic rocks Features more than 250 figures

illustrations and color photographs to vividly explore the fundamental principles of mineralogy and petrology Offers a holistic approach to both subjects beginning with the formation of geologic structures that is followed by the hosting of mineral deposits and the exploration and extraction of lucrative usable products that improve the health of global economies Includes new content on minerals and petrology in extraterrestrial environments and case studies on hazards in the mining industry

Europe's Space Programme Brian Harvey, 2003-02-14 A first comprehensive account of the development of Europe's highly successful space programme Explains the politics science and organisation of the European Space Programme and the many technological achievements of its satellites and rockets Highlights the major contributions of the European Space Agency's scientific and applications programmes and puts them in a global perspective Focuses on Europe placing the various national programmes in a European context

Assessment of Planetary Protection Requirements for Mars Sample Return Missions National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Review of Planetary Protection Requirements for Mars Sample Return Missions, 2009-06-06 NASA maintains a planetary protection policy to avoid the forward biological contamination of other worlds by terrestrial organisms and back biological contamination of Earth from the return of extraterrestrial materials by spaceflight missions Forward contamination issues related to Mars missions were addressed in a 2006 National Research Council NRC book Preventing the Forward Contamination of Mars However it has been more than 10 years since back contamination issues were last examined Driven by a renewed interest in Mars sample return missions this book reviews updates and replaces the planetary protection conclusions and recommendations contained in the NRC's

1997 report Mars Sample Return Issues and Recommendations The specific issues addressed in this book include the following The potential for living entities to be included in samples returned from Mars Scientific investigations that should be conducted to reduce uncertainty in the above assessment The potential for large scale effects on Earth's environment by any returned entity released to the environment Criteria for intentional sample release taking note of current and anticipated regulatory frameworks and The status of technological measures that could be taken on a mission to prevent the inadvertent release of a returned sample into Earth's biosphere

Grading NASA's Solar System Exploration Program National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Assessing the Solar System Exploration Program, 2008-04-25 The NASA Authorization Act of 2005 directed the agency to ask the NRC to assess the performance of each division in the NASA Science directorate at five year intervals In this connection NASA requested the NRC to review the progress the Planetary Exploration Division has made in implementing recommendations from previous relevant NRC studies This book provides an assessment of NASA's progress in fulfilling those recommendations including an evaluation how well it is doing and of current trends The book covers key science questions flight missions Mars exploration research and analysis and enabling technologies Recommendations are provided for those areas in particular need of improvement

Asteroids IV Patrick Michel, Francesca E. DeMeo, William F. Bottke, 2015-12-31 Over the past decade asteroids have come to the forefront of planetary science Scientists across broad disciplines are increasingly recognizing that understanding asteroids is essential to discerning the basic processes of planetary formation including how their current distribution bespeaks our solar system's cataclysmic past For explorers the nearest asteroids beckon as the most accessible milestones in interplanetary space offering spaceflight destinations easier to reach than the lunar surface For futurists the prospects of asteroids as commercial resources tantalize as a twenty first century gold rush albeit with far greater challenges than faced by nineteenth century pioneers For humanity it is the realization that asteroids matter It is not a question of if but when the next major impact will occur While the disaster probabilities are thankfully small fully cataloging and characterizing the potentially hazardous asteroid population remains unfinished business Asteroids IV sets the latest

scientific foundation upon which all these topics and more will be built upon for the future Nearly 150 international authorities through more than 40 chapters convey the definitive state of the field by detailing our current astronomical compositional geological and geophysical knowledge of asteroids as well as their unique physical processes and interrelationships with comets and meteorites Most importantly this volume outlines the outstanding questions that will focus and drive researchers and students of all ages toward new advances in the coming decade and beyond

Vision and Voyages for Planetary Science in the Decade 2013-2022 National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Planetary Science Decadal Survey, 2012-01-30 In recent years planetary science has seen a tremendous growth in new knowledge Deposits of water ice exist at the Moon's poles Discoveries on the surface of Mars point to an early warm wet climate and perhaps conditions under which life could have emerged Liquid methane rain falls on Saturn's moon Titan creating rivers lakes and geologic landscapes with uncanny resemblances to Earth's

Vision and Voyages for Planetary Science in the Decade 2013-2022 surveys the current state of knowledge of the solar system and recommends a suite of planetary science flagship missions for the decade 2013-2022 that could provide a steady stream of important new discoveries about the solar system Research priorities defined in the report were selected through a rigorous review that included input from five expert panels NASA's highest priority large mission should be the Mars Astrobiology Explorer-Cacher (MAX-C) a mission to Mars that could help determine whether the planet ever supported life and could also help answer questions about its geologic and climatic history Other projects should include a mission to Jupiter's icy moon Europa and its subsurface ocean and the Uranus Orbiter and Probe mission to investigate that planet's interior structure atmosphere and composition For medium size missions *Vision and Voyages for Planetary Science in the Decade 2013-2022* recommends that NASA select two new missions to be included in its New Frontiers program which explores the solar system with frequent mid size spacecraft missions If NASA cannot stay within budget for any of these proposed flagship projects it should focus on smaller less expensive missions first

Vision and Voyages for Planetary Science in the Decade 2013-2022 suggests that the National Science Foundation expand its funding for existing laboratories and establish new facilities as needed It also recommends that the program enlist the participation of international partners This report is a vital resource for government agencies supporting space science the planetary science community and the public
