H. Hoskyns,2012-12-06 In the past the teaching of electricity and electronics has more often than not been carried out from a theoretical and often highly academic standpoint Fundamentals and basic concepts have often been presented with no indication of their practical applications and all too frequently they have been illustrated by artificially contrived laboratory experiments bearing little relationship to the outside world The course comes in the form of fourteen fairly open ended constructional experiments or projects Each experiment has associated with it a construction exercise and an explanation The basic idea behind this dual presentation is that the student can embark on each circuit following only the briefest possible instructions and that an open ended approach is thereby not prejudiced by an initial lengthy encounter with the theory behind the project this being a sure way to dampen enthusiasm at the outset As the investigation progresses

questions inevitably arise Descriptions of the phenomena encountered in the experiments are therefore given in the explanations Although these were originally intended to be for the teacher s guidance they have been found in fact to be quite suitable for use by the student In the explanations mathematics has been eliminated wherever possible mechanistic descriptions of phenomena being preferred in all cases Stress is thereby placed on concepts rather than on mere algebraic relationships It is hoped that students of weak mathematical background will as a result not be prevented from following the explanations and deriving some benefit from these (Intermediate, or second year) Thomas Thornley,1901 *The City & Guilds Textbook Level 2 Hairdressing and Barbering for the Technical Certificates* Keryl Titmus,2017-10-30 Written specifically for the new City Guilds Level 2 Technical Certificates in hairdressing or barbering this book will provide your learners with everything they need to know to succeed in their hairdressing studies Complementing quality teaching this textbook covers all the knowledge required for each unit of study Carefully matched to the requirements of the new qualifications this comprehensive textbook will provide you and your learners all the guidance you need through this period of transition in clear and accessible language Contains over a thousand photographs to ensure learners can visualise all the necessary practical skills Provides invaluable guidance on the more rigorous assessment regime including written exams and synoptic end tests
