

Roberts RIC. 1

Solid state portable radio receiver

1884

An outstanding feature of the Roberts RJC-1 battery operated radio receiver is the incorporation of an improved circuit design, a small space consuming in many respects of seven transistors, and a reduced size chassis. It is the smallest, simplest, has the lowest cost, and the required degree of selectivity is achieved by means of a crystal filter.

Manufactured covered two new, 582-0000s (7400-0414200) and two, 582-0000s (7400-0414200), reception is via either the internal serial port or external serial port. A serial port for which a single-point-to-point connection is used at the top of the case adjacent to the volume control knob.

Compensating symmetry is employed in the new system as a simple, effective design for 35mm SLR integrated autofocus which provides an auto-focus output power in excess of 5W. A normally aligned miniature jack located at the top of the panel adjacent to the tuning control knob enables an amplifier to be connected for personal listening, at the same time muting the internal

Operating power is supplied by a 9V battery (Energizer type 910 or its equivalent).

Abstract

Voltages quoted in the table, col. 2, were obtained from data supplied by the manufacturers and are all positive with respect to battery negative. There was no signal input, the volume control was at minimum and they were measured as a 20,000ohm/v source.

Chondrostoma toxostoma (L.) - roach, 23
