software includes algorithms for solar altitude azimuth angle calculations required in following the sun across the sky. In using the longitude latitude GPS coordinates of the solar tracker location these sun tracking software tools support precision solar tracking by determining the solar altitude azimuth coordinates for the sun trajectory in altitude azimuth tracking at the tracker location using certain sun angle formulas in sun vector calculations. Instead of following the sun software a sun tracking sensor such as a sun sensor or webcam or video camera with vision based sun following image processing software can also be used to determine the position of the sun optically. Such optical feedback devices are often used in solar panel tracking systems and dish tracking systems. Dynamic sun tracing is also used in solar surveying DNI analyser and sun surveying systems that build solar infographics maps with solar radiance irradiance and DNI models for GIS geographical information system. In this way geospatial methods on solar environment interaction makes use of geospatial technologies GIS Remote Sensing and Cartography Climatic data and weather station or weather center data as well as queries from sky servers and solar resource database systems i.e. on DB2 Sybase Oracle SQL MySQL may also be associated with solar GIS maps. In such solar resource modelling systems a pyranometer or solarimeter is normally used in addition to measure direct and indirect scattered dispersed reflective radiation for a particular geographical location. Sunlight analysis is important in flash photography where photographic lighting are important for photographers. GIS systems are used by architects who add sun shadow applets to study architectural shading or sun shadow analysis solar flux calculations optical modelling or to perform weather modelling. Such systems often employ a computer operated telescope type mechanism with ray tracing program software as a solar navigator or sun tracer that determines the solar position and intensity. The purpose of this booklet is to assist developers to track and trace suitable source code and solar tracking algorithms for their application whether a hobbyist scientist technician or engineer. Many open source sun following and tracking algorithms and source code for solar tracking programs and modules are freely available to download on the internet today. Certain proprietary solar tracker kits and solar tracking controllers include a software development kit SDK for its application programming interface API attributes. Pebble Widget libraries widget toolkits GUI toolkit and UX libraries with graphical control elements are also available to construct the graphical user interface GUI for your solar tracking or solar power monitoring program. The solar library used by solar position calculators solar simulation software and solar contour calculators include machine program code for the solar hardware controller which are software programmed into Micro controllers Programmable Logic Controllers PLC programmable gate arrays Arduino processor or PIC processor. PC based solar tracking is also high in demand using C Visual Basic VB as well as MS Windows Linux and Apple Mac based operating systems for sun path tables on Matlab Excel. Some books and internet webpages use other terms such as sun angle calculator sun position calculator or solar angle calculator. As said such software code calculate the solar azimuth angle solar altitude angle solar elevation angle or the solar Zenith angle. Zenith solar angle is simply referenced from vertical plane the mirror of the elevation angle.

Proceedings of the Fifth International Scientific Conference “Intelligent Information Technologies for Industry” (IITI’21) Sergey Kovalev,Valery Tarassov,Vaclav Snasel,Andrey Sukhanov,2021-09-15 This book presents key advances in intelligent information technologies for industry This book of Lecture Notes in Networks and Systems contains the papers presented in the main track of IITI 2021 the Fifth International Scientific Conference on Intelligent Information Technologies for Industry held on September 30 October 4 2021 in Sirius Russia The conference was jointly co organized by Rostov State Transport University Russia and V B Technical University of Ostrava Czech Republic with the participation of Russian Association for Artificial Intelligence RAAI and Sirius University Russia IITI 2021 was devoted to practical models and industrial applications related to intelligent information systems It was considered as a meeting point for researchers and practitioners to enable the implementation of advanced information technologies into various industries Nevertheless some theoretical talks concerning the state of the art in intelligent systems and soft computing were also included into proceedings There were 180 paper submissions from 14 countries Each submission was reviewed by at least three chairs or PC members We accepted 69 regular papers 38 % Unfortunately due to limitations of conference topics and edited volumes the Program Committee was forced to reject some interesting papers which did not satisfy these topics or publisher requirements We would like to thank all authors and reviewers for their work and valuable contributions The friendly and welcoming attitude of conference supporters and contributors made this event a success

Advanced Topics In Scattering And Biomedical Engineering - Proceedings Of The 8th International Workshop On Mathematical Methods In Scattering Theory And Biomedical Engineering

Dimitrios I Fotiadis, Demosthenes Polyzos, Antonios Charalambopoulos, 2008-05-20 This volume of proceedings consists of the

papers presented during the 8th International Workshop on Mathematical Methods in Scattering Theory and Biomedical Engineering held in Lefkada Greece on 27-29 September 2007. The book contains papers on scattering theory and biomedical engineering, two rapidly evolving fields which have a considerable impact on today's research. All the papers are state of the art, have been carefully reviewed before publication, and the authors are well known in the scientific community. In addition, some papers focus more on applied mathematics, which is the solid ground for development and innovative research in scattering and biomedical engineering.

Optimizing Power & Reliability in Mobile Computing with DVFS Somdip Dey, 2023-05-10. Low power mobile computing systems such as smartphones and wearables have become an integral part of our daily lives and are used in various ways to enhance our daily lives. Majority of modern mobile computing systems are powered by multi-processor System on a Chip (MPSoC) where multiple processing elements are utilized on a single chip. Given the fact that these devices are battery operated most of the times, thus have limited power supply and the key challenges include catering for performance while reducing the power consumption. Moreover, the reliability in terms of lifespan of these devices are also affected by the peak thermal behaviour on the device, which retrospectively also makes such devices vulnerable to temperature side channel attack. This book is concerned with performing Dynamic Voltage and Frequency Scaling (DVFS) on different processing elements such as CPU, GPU, and memory unit such as RAM to address the aforementioned challenges. Firstly, we design a Computer Vision based machine learning technique to classify applications automatically into different categories of workload such that DVFS could be performed on the CPU to reduce the power consumption of the device while executing the application. Secondly, we develop a reinforcement learning based agent to perform DVFS on CPU and GPU while considering the user's interaction with such devices to optimize power consumption and thermal behaviour. Next, we develop a heuristic based automated agent to perform DVFS on CPU, GPU, and RAM to optimize the same while executing an application. Finally, we explored the effect of DVFS on CPUs leading to vulnerabilities against temperature side channel attack and hence we also designed a methodology to secure against such attack while improving the reliability in terms of lifespan of such devices. This book is based on the doctoral thesis titled Novel DVFS Methodologies For Power Efficient Mobile MPSoC. Cite Dey Somdip, 2023. Novel DVFS Methodologies For Power Efficient Mobile MPSoC. Doctoral thesis, University of Essex.

73 Topic-wise 2025 - 2010 SSC Mathematics Previous Year Solved Papers - CGL (Tier I & II), CHSL (Tier I & II), MTS & CPO 7th Edition | 3200+ Quantitative Aptitude PYQs
Disha Experts, The updated 7th Edition of the Bestselling book 73 Topic wise 2025 2010 SSC Mathematics Previous Year Solved Papers consists of original past solved papers conducted for the major SSC Exams: SSC CGL 10+2, CHSL Sub Inspector and Multi Tasking of Past 16 Years from the year 2010 to 2025. The coverage of the papers has been kept RECENT 2010 to 2025 as they actually reflect the changed pattern of the SSC exams. The book also includes 2022-25 SSC CGL tier II question paper. In all, there are 73 Question papers covering 3200 MCQs from 2010 to 2025 which have been divided into 14 Topics.

The solution of each and every question is provided in detail step by step so as to provide 100% concept clarity to the students Practicing these questions aspirants will come to know about the pattern and toughness of the questions asked in the examination In the end this book will make the aspirants competent confident enough to crack the uncertainty of success in the Entrance Examination The strength of the book lies in the originality of its question papers and Errorless Solutions
