Perceptual Aspects Of Sound Scattering In Concert Halls Renzo Vitale,2015-06-16 This work aims to expand the understanding of sound scattering in architectural spaces as well as the comprehension of its influence on the auditory perception in concert halls The notion of scattering coefficient which numerically represents the physical phenomenon of sound scattering constitutes the main paradigm for the entire work In a first part the scattering coefficient is introduced in its meaning and implications New empirical data of scattering objects have been determined and a revised scale model of a reverberation chamber for avoiding measurement accuracies is presented A case study of classroom acoustics proves the benefit of experimental data on the accuracy of acoustic computer simulations Furthermore the implementation of scattering coefficient in different room acoustic computer software is shown by using a concert hall as a case study In a second part the relationship between scattering coefficient and auditory perception is explored Binaural impulse responses have been determined for different scenarios such as two virtual enclosed spaces and one real concert hall and convolved with music samples to be used in listening tests Results from listening tests show how changes in scattering coefficient of diffusing surfaces affect the perception of music among the audience in concert halls

Glossary of Morphology Federico Vercellone, Salvatore Tedesco, 2020-12-01 This book is a significant novelty in the scientific and editorial landscape Morphology is both an ancient and a new discipline that rests on Goethe's heritage and re-forms it in the present through the concepts of form and image The latter are to be understood as structural elements of a new cultural grammar able to make the late modern world intelligible In particular compared to the original Goethean project but also to C P Snow's idea of unifying the two cultures the fields of morphological culture that are the object of this glossary have profoundly changed The ever increasing importance of the image as a polysemic form has made the two concepts absolutely transitive so to speak This is concomitant with the emergence of a culture that revolves around the image attracting the verbal logos into its orbit Incidentally even the hermeneutic relationship between past and present relies more and more on the image causing deep changes in cultural environments Form and image are not just bridging concepts as in the field of ancient morphology but real transitive concepts that define the state of a culture From the Internet to smartphones television advertising etc we are witnessing as Horst Bredekamp observes an immense mass of images that fill our time and affect the most diverse areas of our culture The ancient connection between science and art recalled by Goethe emerges with unusual evidence thanks to intersecting patterns and expressive forms that are sometimes shared by different forms of knowledge Creating a glossary and a culture of these intersections is the task of morphology which thus enters into the boundaries between aesthetics art design advertising and sciences from mathematics to computer science to physics and to biology in

order to provide the founding elements of a grammar and a syntax of the image The latter in its formal quality both expressive and symbolic is a fundamental element in the unification of the various kinds of knowledge which in turn come to be configured in this regard also as styles of vision The glossary is subdivided into contiguous sections within a complex framework of cross references In addition to the two curators the book features the collaboration of a team of scholars from the individual disciplines appearing in the glossary

Professional Error Competence of Preservice Teachers Eveline Wuttke, Jürgen Seifried, 2017-04-06 This book discusses competence teacher competence and professional error competence of teachers and emphasizes the need for a training programme that supports the latter The book starts out by presenting results from previous studies that underline the necessity to train professional error competence of teachers especially in the field of accounting The studies analysed include research in the field of accounting and on the efficacy of teacher training Next considerations on training programmes are presented From these analyses a training programme was designed to support professional error competence in accounting This training programme aims for increased knowledge about students errors content knowledge and offers strategies to handle these errors pedagogical content knowledge Both are central facets of professional error competence The book describes the development characteristics implementation and evaluation of this programme It details the test platform that was developed and used for the assessment of professional error competence and critically discusses the results from the evaluation of the training programme from various perspectives The current discussion on teacher training and expertise is influenced by empirical results obtained in international large scale studies such as PISA and TIMSS The findings of the studies underpin the discussion on teaching

quality and teachers professional competences The key issue is that teacher competence has an impact on teaching quality and this in turn influences students achievements International comparative studies reveal that teachers often lack central competence facets and therefore it is assumed that standard teacher training programmes may fail to successfully prepare student teachers for their tasks Therefore customized training programmes are currently being discussed Their focus is mostly on pedagogical content knowledge and classroom practices because these competence facets are essential for teaching quality
