Brown, 2014-11-05 The papers in Volume 28 of *Tax Policy and the Economy* illustrate the depth and breadth of the research by NBER research associates who study taxation and government spending programs. The third discusses the taxation of housing, focusing on the ways in which current income tax rules may affect location and consumption decisions and lead to economic inefficiencies. The fourth paper offers an historical perspective on the political economy of gasoline taxes, with a particular focus on the response to the oil shocks of the early 1970s. The fifth and final paper uses the tools of financial economics to estimate the unfunded liabilities of the Pension Benefit Guaranty Corporation.

Urban Complexity and Planning Shih-Kung Lai, Haoying Han, 2016-02-17 In recent years there has been a new understanding of how cities evolve and function which reflects the emergent paradigm of complexity The crux of this view is that cities are created by differentiated actors involved in individual small scale projects interacting in a complex way in the urban development process This bottom up approach to urban modeling not only transforms our understanding of cities but also improves our capabilities of harnessing the urban development process For example we used to think that plans control urban development in an aggregate holistic way but what actually happens is that plans only affect differentiated actors in seeking their goals through information In other words plans and regulations set restrictions or incentives of individual behaviour in the urban development process through imposing rights information and prices and the analysis of the effects of plans and regulations must take into account the complex urban dynamics at a disaggregate level of the urban development process Computer simulations provide a rigorous promising analytic tool that serves as a supplement to the traditional mathematical approach to depicting complex urban dynamics Based on the emergent paradigm of complexity the book provides an innovative set of arguments about how we can gain a better understanding of how cities emerge and function through computer simulations and how plans affect the evolution of complex urban systems in a way distinct from what we used to think they should Empirical case studies focus on the development of a compact urban hierarchy in Taiwan China and the USA but derive more generalizable principles and relationships among cities complexity and planning

Distributional Effects of Environmental and Energy Policy Don Fullerton, 2017-05-15 Many effects of environmental and energy policy are likely to disproportionately burden those with low income First it raises the price of fossil fuel intensive products that constitute a high fraction of low income budgets like gasoline heating fuel and electricity Second the handout of pollution permits to firms provides value to those who own them Third low income individuals may place more value on food and shelter than on improvements in environmental quality so high income individuals may get the most benefit of pollution abatement Fourth air quality improvements may raise the value of houses owned by landlords rather than helping renters These effects might all hurt the poor more than the rich This book brings together the seminal economics literature that studies whether these fears are valid and whether anything can be done about them
