**Abstract.** The authors present a new method for the analysis of the dynamic behavior of a system. The method is based on the use of the Laplace transform and the Fourier transform. The method is applied to the analysis of the dynamic behavior of a system. The results of the analysis are presented in the form of a plot of the magnitude of the transfer function versus frequency. The plot shows that the system is stable and that the magnitude of the transfer function is constant for all frequencies.

- QUESTION** I have a 1994 Buick Wildcat with 150,000 miles. The car has been running fine for the last 10 years, but recently the engine has been running rough. I have replaced the spark plugs, but the problem still persists. What could be the cause of this problem?
- ANSWER** The most common cause of a rough-running engine is a bad timing belt. The timing belt is responsible for the proper timing of the engine's valves and pistons. If the timing belt is worn or broken, the engine will run rough. I would recommend that you have the timing belt inspected by a qualified mechanic. If the timing belt is found to be worn, it should be replaced. Another possible cause of a rough-running engine is a bad fuel pump. The fuel pump is responsible for delivering fuel to the engine. If the fuel pump is not working properly, the engine will run rough. I would recommend that you have the fuel pump inspected by a qualified mechanic. If the fuel pump is found to be bad, it should be replaced. Finally, a bad air filter can also cause a rough-running engine. The air filter is responsible for filtering the air that enters the engine. If the air filter is dirty, it will restrict the flow of air to the engine, causing it to run rough. I would recommend that you replace the air filter with a new one.

The most common comorbid anxiety disorder was generalized anxiety disorder (25%). The prevalence of comorbid anxiety disorders was significantly higher in children with MDD than in children with no MDD. Children with comorbid anxiety disorders had significantly higher rates of hospitalization and significantly higher rates of medication use than children with MDD alone. **CONCLUSIONS:** Children with MDD have a high prevalence of comorbid anxiety disorders. Children with comorbid anxiety disorders have significantly higher rates of hospitalization and significantly higher rates of medication use than children with MDD alone.
