Mapping in Mathematics Research into Practice is the first comprehensive book on concept mapping in mathematics. It provides the reader with an understanding of how the meta cognitive tool namely hierarchical concept maps and the process of concept mapping can be used innovatively and strategically to improve planning teaching learning and assessment at different educational levels. This collection of research articles examines the usefulness of concept maps in the educational setting with applications and examples ranging from primary grade classrooms through secondary mathematics to pre service teacher education undergraduate mathematics and post graduate mathematics education. A second meta cognitive tool called vee diagrams is also critically examined by two authors particularly its value in improving mathematical problem solving. Thematically the book flows from a historical development overview of concept mapping in the sciences to applications of concept mapping in mathematics by teachers and pre service teachers as a means of analyzing mathematics topics planning for instruction and designing assessment tasks including applications by school and university students as learning and review tools. This book provides case studies and resources that have been field tested with school and university students alike. The findings presented have implications for enriching mathematics learning and making problem solving more accessible and meaningful for students. The theoretical underpinnings of concept mapping and of the studies in the book include Ausubel's cognitive theory of meaningful learning constructivist and Vygotskian psychology to name a few. There is evidence particularly from international studies such as PISA and TIMSS and mathematics education research which suggest that students mathematical literacy and problem solving skills can be enhanced through students collaborating and interacting as they work discuss and communicate mathematically. This book proposes the meta cognitive strategy of concept mapping as one viable means of promoting communicating and explicating students mathematical thinking and reasoning publicly in a social setting e.g. mathematics classrooms as they engage in mathematical dialogues and discussions. Concept Mapping in Mathematics Research into Practice is of interest to researchers graduate students teacher educators and professionals in mathematics education.

The Celestial Scriptures C. M. Houck, 2002-01-22 The Celestial Scriptures will challenge every spiritual principle that has been imposed upon us through tenets or organized religions It is not easy to face the fact that religious pronouncements often contradictory are primarily distortions regarding some universal truth as seen through myth and superstition The Celestial Scriptures will challenge the reader to get acquainted with a means of spiritual understanding that is unfamiliar for it reinstates an extremely ancient device as a teaching tool The irony is that most people in our technological society have at least a passing awareness of this device and associate it with a frivolous pastime In spite of all humankind s technological advances we have not learned to override the conditioned religious interpretations that were set down by ancestors who insisted that the Earth was the center of Creation We have climbed out of such simplemindedness and have raised virtual mountains of technological wonders But amazingly from the summits these mountains where we are privileged to peer into the living heart of universal truths we still bow before mythic explanations and superstitions It is time to face the fact that deceptions have lurked in the halls of faith for far too long
