## ► Magnetic Forces

- Def.-the force a magnet exerts on another magnet, or iron or a similar metal, or on moving charges
- Act over a distance just like electric forces.
- Magnetic force is strongest at the poles; magnets have two magnetic poles (regions where the magnet's force is strongest)
- north pole and south pole
- Key Concept: Like magnetic poles repel one another, and opposite magnetic poles attract one another.

High Field Magnetism F. Herlach, J.J.M. Franse, 2016-06-03 High Field Magnetism covers the proceedings of the 2nd International Symposium on High Field Magnetism held in Leuven Belgium on July 20 23 1988 The book focuses on magnetism superconductivity superconductors and magnetic properties The selection first offers information on DC laboratory electromagnets and design of magnet coils for semi continuous magnetic fields Discussions focus on resistive and hybrid magnets power stress and homogeneity of the field The book then examines production of ultra high magnetic fields and their application to solid state physics laboratory facility for the magnetic flux compression systems using large explosives and production of repeating pulsed high magnetic field The book takes a look at an electronic monitoring system for hybrid magnets non destructive quasi static pulsed magnetic fields at Toulouse and high field laboratory for superconducting materials at the Institute for Materials Research at Tohoku University The manuscript then ponders on high magnetic field facility at Osaka University advances in high field magnetism at Osaka and status and prospects of superconducting Chevrel phase wires for high magnetic field applications The selection is a dependable reference for readers interested in high field magnetism

High Magnetic Field Science and Its Application in the United States National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Committee to Assess the Current Status and Future Direction of High Magnetic Field Science in the United States, 2013-11-25 The Committee to Assess the Current Status and Future Direction of High Magnetic Field Science in the United States was convened by the National Research Council in response to a request by the National Science Foundation This report answers three questions

- 1 What is the current state of high field magnet science engineering and technology in the United States and are there any conspicuous needs to be addressed
- 2 What are the current science drivers and which scientific opportunities and challenges can be anticipated over the next ten years
- 3 What are the principal existing and planned high magnetic field facilities outside of the United States what roles have U S high field magnet development efforts played in developing those facilities and what potentials exist for further international collaboration in this area

A magnetic field is produced by an electrical current in a metal coil This current exerts an expansive force on the coil and a magnetic field is high if it challenges the strength and current carrying capacity of the materials that create the field Although lower magnetic fields can be achieved using commercially available magnets research in the highest achievable fields has been and will continue to be most often performed in large research centers that possess the materials and systems know how for forefront research Only a few high field centers exist around the world in the United States the principal center is the National High Magnetic Field Laboratory NHMFL High Magnetic Field Science and Its Application in the United States considers continued support for a centralized high field facility such as NHFML to be the highest priority This report contains a recommendation for the funding and siting of several new high field nuclear magnetic resonance magnets at user facilities in different regions of the United States

Continued advancement in high magnetic field science requires substantial investments in magnets with enhanced capabilities High Magnetic Field Science and Its Application in the United States contains recommendations for the further development of all superconducting hybrid and higher field pulsed magnets that meet ambitious but achievable goals
