impact of the school counseling program on student achievement *River Dynamics* Bruce L. Rhoads, 2020-04-29 Rivers are important agents of change that shape the Earth's surface and evolve through time in response to fluctuations in climate and other environmental conditions. They are fundamental in landscape development and essential for water supply, irrigation, and transportation. This book provides a comprehensive overview of the geomorphological processes that shape rivers and that produce change in the form of rivers. It explores how the dynamics of rivers are being affected by anthropogenic change, including climate change, dam construction, and modification of rivers for flood control and land drainage. It discusses how concern about environmental degradation of rivers has led to the emergence of management strategies to restore and naturalize these systems and how river management techniques work best when coordinated with the natural dynamics of rivers. This textbook provides an excellent resource for students, researchers, and professionals in fluvial geomorphology, hydrology, river science, and environmental policy.

Critical Perspectives on PISA as a Means of Global Governance António Teodoro, 2022-03-24 This volume offers a critical examination of the Programme for International Students Assessment (PISA), focusing on its origins and implementation, relationship to other international large-scale assessments, and its impacts on educational policy and reform at national and cross-national levels. Using empirical data gathered from a research project carried out by the CeiED at Lusofona University, Lisbon, the text highlights connections between PISA and emergent issues, including the international circulation of big science expertise and policy, and identifies its conceptual and methodological limits as a global governance project. The volume ultimately provides a novel framework for understanding how OECD priorities are manifested through a regulatory instrument based on Human and Knowledge Capital Theory, and so makes a powerful case to search for new humanistic approaches. This text will benefit researchers, academics, and educators with an interest in education policy and politics, international and comparative education, and the sociology of education more broadly. Those interested in the history of education will also benefit from this volume.
