**General Aptitude Compulsory Solved Papers** YCT Expert Team , 2023 24 NTA CSIR NET JRF PART A General Aptitude Compulsory Solved Papers      *Time And Science - Volume 3: Physical Sciences And Cosmology* Remy Lestienne, Paul Harris, 2023-06-22 The present volume of Time and Science series is devoted to Physical Sciences and Cosmology Today more than ever the question is Time an ontological property a necessary ingredient for the physical description of the world or a purely epistemological element relative to our situation in the world worry physicists and cosmologists alike For many of them Relativity and particularly General Relativity as well as its reconciliation with quantum mechanics in the elaboration of a quantum theory of gravitation points to a negative answer to the first alternative and leads them to deny the objective reality of time For others the answer is nuanced by the evidence of an emerging temporal property when one climbs the scales of the complexity of systems and or the applicability of the statistical laws of thermodynamics But for some the illusion of the unreality of time comes from certain confusions that they denounce and plead for the re establishment of time at the heart of physical theories      **Logical Empiricism and the Physical Sciences**

Sebastian Lutz, Adam Tamas Tuboly, 2021-04-26 This volume has two primary aims to trace the traditions and changes in methods concepts and ideas that brought forth the logical empiricists philosophy of physics and to present and analyze the logical empiricists various and occasionally contrary ideas about the physical sciences and their philosophical relevance These original chapters discuss these developments in their original contexts and social and institutional environments thus showing the various fruitful conceptions and philosophies behind the history of 20th century philosophy of science Logical Empiricism and the Natural Sciences is divided into three thematic sections Part I surveys the influences on logical empiricism s philosophy of science and physics It features chapters on Maxwell s role in the worldview of logical empiricism on Reichenbach s account of objectivity on the impact of Poincaré on Neurath s early views on scientific method Frank s

exchanges with Einstein about philosophy of physics and on the forgotten role of Kurt Grelling Part II focuses on specific physical theories including Carnap's and Reichenbach's positions on Einstein's theory of general relativity Reichenbach's critique of unified field theory and the logical empiricists' reactions to quantum mechanics The third and final group of chapters widens the scope to philosophy of science and physics in general It includes contributions on von Mises' frequentism Frank's account of concept formation and confirmation and the interrelations between Nagel's Feigl's and Hempel's versions of logical empiricism This book offers a comprehensive account of the logical empiricists' philosophy of physics It is a valuable resource for researchers interested in the history and philosophy of science philosophy of physics and the history of analytic philosophy

Anforth,2024-10-11 This book questions the extent to which some physical scientists may have unintentionally misused the English language to varying degrees in arriving at theories that are presented to the world as being statements of fact about the universe The book focuses primarily on large and small scale extremes i e cosmological theories and quantum theories It deals with the core concepts of time and space as they are presented in the theories under consideration As a demonstration of the sensitivity of the outcome of physical modelling to the assumptions made the book presents an alternative cosmological model based on some altered physical assumptions that see the much vaunted inconsistency between General Relativity and Quantum Field Theory disappear      **Data-driven Modelling and Scientific Machine Learning in Continuum Physics**

Krishna Garikipati,2024-07-29 This monograph takes the reader through recent advances in data driven methods and machine learning for problems in science specifically in continuum physics It develops the foundations and details a number of scientific machine learning approaches to enrich current computational models of continuum physics or to use the data

generated by these models to infer more information on these problems The perspective presented here is drawn from recent research by the author and collaborators Applications drawn from the physics of materials or from biophysics illustrate each topic Some elements of the theoretical background in continuum physics that are essential to address these applications are developed first These chapters focus on nonlinear elasticity and mass transport with particular attention directed at descriptions of phase separation This is followed by a brief treatment of the finite element method since it is the most widely used approach to solve coupled partial differential equations in continuum physics With these foundations established the treatment proceeds to a number of recent developments in data driven methods and scientific machine learning in the context of the continuum physics of materials and biosystems This part of the monograph begins by addressing numerical homogenization of microstructural response using feed forward as well as convolutional neural networks Next is surrogate optimization using multifidelity learning for problems of phase evolution Graph theory bears many equivalences to partial differential equations in its properties of representation and avenues for analysis as well as reduced order descriptions all ideas that offer fruitful opportunities for exploration Neural networks by their capacity for representation of high dimensional functions are powerful for scale bridging in physics an idea on which we present a particular perspective in the context of alloys One of the most compelling ideas in scientific machine learning is the identification of governing equations from dynamical data another topic that we explore from the viewpoint of partial differential equations encoding mechanisms This is followed by an examination of approaches to replace traditional discretization based solvers of partial differential equations with deterministic and probabilistic neural networks that generalize across boundary value problems The monograph closes with a brief outlook on current emerging ideas in scientific machine learning

**Japanese Women in Science and Engineering** Naonori Kodate, Kashiko Kodate, 2015-07-30 The gender gap in science technology engineering and mathematics STEM varies greatly from country to country and the number of Japanese women in these fields remains relatively few This prompts us to ask why the proportion of female scientists in Japan is still remarkably low and what measures the government universities and research institutes are taking to address this issue This book sheds light on historical developments and the current gender equality situation in Japan through the lens of women in STEM It shows how a policy of gender equality in science and engineering has been introduced through the coordinated efforts of academia scientific societies and the government and how this has led to a slow but steady increase in female representation The book draws on extensive data including interviews with government officials scientists and educators in Japan to provide a revealing case study on how the underrepresentation of women in the fields of science technology and engineering has been approached and dealt with by a national government It heralds a new era for female scientists by showcasing several programmes undertaken by government universities and national research institutions to support multiple career paths for and the progression of female scientists in Japan Tracing the historical development of Japan s policies towards women in

**Émilie Du Châtelet and the Foundations of Physical Science** Katherine Brading,2019-01-15 The centerpiece of milie Du Ch telet s philosophy of science is her Foundations of Physics first published in 1740 The Foundations contains epistemology metaphysics methodology mechanics and physics including such pressing issues of the time as whether there are atoms the appropriate roles of God and of hypotheses in scientific theorizing how if at all bodies are capable of acting on one another and whether gravity is an action at a distance force Du Ch telet sought to resolve these issues within a single philosophical framework that builds on her critique and appraisal of all the leading alternatives Cartesian Newtonian Leibnizian and so forth of the period The text is remarkable for being the first to attempt such a synthetic project and even more so for the accessibility and clarity of the writing This book argues that Du Ch telet put her finger on the central problems that lay at the intersection of physics and metaphysics at the time and tackled them drawing on the most up to date resources available It will be a useful source for students and scholars interested in the history and philosophy of science and in the impact of women philosophers in the early modern period Mobile, Ubiquitous, and Pervasive Learning Alejandro Peña Ayala,2015-12-12 This book is concerned with the mobile ubiquitous and pervasive learning arena It present a collection of works corresponding to four categories reviews studies conceptual proposals and approaches As a result of the

submission and revision processes eight manuscripts were accepted and organized into the aforementioned four parts as follows Review a couple of chapters offer a survey of related works One concerns with the diversity of mobile ubiquitous and pervasive labor where interested findings are unveiled based on correlations Other focuses on adaptive and adaptable architectures that are suitable to implement ubiquitous learning sceneries whose contribution represents a model of a domain specific architecture Studies two chapters explore issues related to the effect of question styles made through smartphones and tablets and the disposition of teachers to exploit mobile devices at classroom Conceptual a pair of chapters offer a given proposal the first to develop adaptive mobile learning systems by means of a framework based on contextual information and the second with the purpose to share some guidelines of how to apply cloud computing in the development and operation of mobile Approaches two chapters apply a specific paradigm as part of a whole application and reveal the achieved impact One of them uses augmented reality to encourage children to learn about trees as context sensitive informal learning The other immerses children in playing a learning game to learn math by cooperating between members team and interacting through mobile devices This volume will be a source of interest for researchers practitioners professors and postgraduate students aimed at updating their knowledge and finding targets for future work in the mobile ubiquitous and pervasive learning field
