## ± Hooke's Law

**Description:** ± Includes Math Remediation. Analyze the force of springs on Haitian taptaps as an application of Hooke's law.

## Learning Goal:

To understand the use of Hooke's law for a spring.

Hooke's law states that the *restoring force*  $\vec{F}$  on a spring when it has been stretched or compressed is proportional to the displacement  $\vec{x}$  of the spring from its equilibrium position. The equilibrium position is the position at which the spring is neither stretched nor compressed.

Recall that  $\vec{F} \propto \vec{x}$  means that  $\vec{F}$  is equal to a constant times  $\vec{x}$ . For a spring, the proportionality constant is called the *spring constant* and denoted by  $k$ . The spring constant is a property of the spring and must be measured experimentally. The larger the value of  $k$ , the stiffer the spring. In equation form, Hooke's law can be written

$$\vec{F} = -k\vec{x}.$$

The minus sign indicates that the force is in the opposite direction to that of the spring's displacement from its equilibrium length and is "trying" to *restore* the spring to its equilibrium position. The magnitude of the force is given by  $F = kx$ , where  $x$  is the magnitude of the displacement.

In Haiti, public transportation is often by taptaps, small pickup trucks with seats along the sides of the pickup bed and railings to which passengers can hang on. Typically they carry two dozen or more passengers plus an assortment of chickens, goats, luggage, etc. Putting this much into the back of a pickup truck puts quite a large load on the truck's springs.

A truck has springs for each wheel, but for simplicity assume that the individual springs can be treated as one spring with a spring constant that includes the effect of all the springs. Also for simplicity, assume that all four springs compress equally when weight is added to the truck and that the equilibrium length of the springs is the length they have when they support the load of an empty truck.

## Part A

A 60 kg driver gets into an empty taptap to start the day's work. The springs compress  $2.5 \times 10^{-2}$  m. What is the effective spring constant of the spring system in the taptap?

Enter the spring constant numerically in newtons per meter using two significant figures.

**Hint 1.** How to approach the problem

The compression of the springs is governed by Hooke's law. The amount the springs are compressed when the driver climbs into the truck is given in the problem statement. The force that acts to compress the springs is the force caused by the driver getting into the truck.

ANSWER:

$$k = \frac{mg}{\Delta x} = 2.7 \times 10^4 \text{ N/m}$$

If you need to use the spring constant in subsequent parts, use the full precision value you calculated, only rounding as a final step before submitting your answer.

## Part B

After driving a portion of the route, the taptap is fully loaded with a total of 26 people including the driver, with an average mass of 60 kg per

*Meta-Quanta* Michael W. Allen, 2023-03-31 Instantaneous quantum entanglements, Einstein's spooky actions in the dark, have been a controversial subject in physics for over 100 years. Human consciousness is an integral part of this phenomenon. Physics cannot ignore entanglement or human consciousness but has yet to find a way to explain these realities in a cogent manner. Meta-Quanta is a thought experiment seeking to address these concerns. The enigma of human consciousness within entanglement, together with quantum theory and relativity, when observed from a state absent time, gives agency to imagining a viable reality to the conundrum of instantaneous entanglement as seemingly unbounded by the speed of light. This perspective also enables mega-macroscopic strands of time demonstrating mirror symmetry to the ultra-microscopic superstrings of physics. This thought experiment does not suggest that the myriad questions of millennia have been answered. This is but another what-if experimental moment, a point of observation empowering freedom of thought, absent traditional boundaries. Engaging our universe from this perspective envisions the intrinsic relationship between philosophy, physics, psychology, dream theory, within psychology and theology, opening new dimensions of ideation in the continuing intellectual struggle to answer humanity's eternal questions regarding what we are, where we came from, and why we are here.

**Teaching and Learning in the Science Laboratory**

Dimitris Psillos, H. Niedderer, 2006-05-05 Scope of the book There is an on going debate regarding the role of labwork in science education which dates back several decades and which illustrates the conviction and interest of teachers researchers and policy makers world wide in the value of laboratory work for understanding science This is evident in more recent books and studies regarding the laboratory which mainly refer to countries with a considerable tradition in practical work in science education Woolnough Alsop 1985 Hodson 1993 Hegarthy Hazel 1990 Wellington 2000 Yet in discussing research studies on labwork several authors express their concern about its effectiveness in facilitating students understanding of various aspects of scientific inquiry They point out a comprehensive re conceptualisation of the aims of labwork and as a consequence of investigating what the students actually learn in different contexts Lazarowitz Tamir 1994 Tobin Tippins 1993 Lunetta 1998 It has also been argued that the relationship between instructional activities and student learning in labwork needs more attention than it has been given in science education research Leach Paulsen 1999 It appears that the case for research based labwork emerges in several quarters in science education particularly among researchers This book presents and discusses a variety of laboratory practices and their effectiveness The studies take into account recent theoretical developments and empirical results concerning students understanding of scientific inquiry A whole chapter is devoted to technological advances offering new learning opportunities for the students and teaching facilities for the teacher
