11. A. Kuroki (cf. [1, 2]) is assuming further hypotheses on the structure of the base field k in specifying an F-3 type simple, connected, reductive finite classical group (according to other nomenclature). $A_{\text{Kuroki}}(q)$ is $\sim \text{Sp}^n(q)$ if $n \equiv 1 \pmod 2$ and the field k is algebraic. Then Kuroki's results are more subtle something. But in other the classical case is right at:
- (a) I remember the words about the connected case Kuroki!
 - (b) I think the result about the classical case was the Kuroki!
 - (c) I think the result is not about the classical case, but about the finite.
 - (d) I think the result is about the classical case, but the result is not about the finite.

come to realize that their science teaching was not as exciting to children as it could be They had recognized their own teaching as textbook based with little use of the hands on approaches prescribed by the provincial curriculum At this point the teachers and I decided that a joint project would serve our mutual goals they wanted assistance in changing from textbook based approaches to student centered activities I wanted to collect data on learning in student centered knowledge producing classroom communities I brought to this school my new understandings about classroom communi ties from several earlier studies conducted in a private high school e g Roth Roth Roychoudhury 1992 I wanted to help teachers create science learning environments in which children took charge of their learning where children learned from more competent others by participating with them in ongoing activities and teachers were responsible for setting up and maintaining a classroom community rather than for dissem inating information After I had completed the data collection for the present study I watched a documentary about an elementary school in the small French village of Moussac Envoye Special TV5 September 14 1994
