

## Uniform Circular Motion

### Purpose:

The purpose of this activity is to explore the characteristics of the motion of an object in a circle at a constant speed.

### Procedure and Questions:

1. Navigate to the Uniform Circular Motion Interactive in the Physics Interactives section of The Physics Classroom website. Experiment with the on-screen buttons in order to gain familiarity with the control of the animation. The object speed, radius of the circle, and object mass can be varied using the sliders or the buttons. The vector nature of velocity and acceleration can be displayed on the screen. A trace of the object's motion is shown. The acceleration of and the net force values are displayed in the animation window. The animation can be started, paused, continued or *reround*.

After gaining familiarity with the program, use it to answer the following questions.

2. **Velocity** is a vector quantity which has both magnitude and direction. Using complete sentences, describe the object's velocity. Comment on both the magnitude and the direction.

The object's velocity is the force that's going around in a circle. The direction it goes in is the centrifugal force. While the magnitude is dependent on the speed.

3. **TRUE or FALSE?**

If an object moves in a circle at a constant speed, its velocity vector will be constant.

Explain your answer.

After several minutes playing with the interactive lab, whenever I changed the speed the velocity changed to match it, never speeding up just remaining at the constant velocity.

4. In the diagram at the right, a variety of positions about a circle are shown. Draw the velocity vector at the various positions; direct the  $v$  arrows in the proper direction and label them as  $v$ . Draw the acceleration vector at the various positions; direct the  $a$  arrows in the proper direction and label them as  $a$ .

$A = \text{red}$   
 $V = \text{black}$
