Sand Tiger Shark Report:

A Preliminary Evaluation of the Status of Shark Species José Ignacio Castro, Christa M. Woodley, Rebecca L. Brudek, Food and Agriculture Organization of the United Nations, 1999 The status of shark species is reviewed based on the available data A review of the history of shark fisheries demonstrates that intensive shark fisheries are not sustainable Numerous problems are encountered in assessing shark populations a general lack of biological and fishery data lack of suitable models and lack of validated age estimates Sharks have an unusual combination of biological characteristics slow growth and delayed maturation long reproductive cycles low fecundity and long life spans These characteristics make them vulnerable to overfishing A preliminary evaluation of the status of shark species is made on the basis of historical data the reproductive potential of each species and the level of exploitation of the species In this document exploited shark species are classified numerically according to their vulnerability The majority of these species are listed as Category 1 indicating that there are not sufficient data to assess the species Available data indicate that sharks are very vulnerable and are threatened by overexploitation in many parts of the world **NOAA Technical Report NMFS**, 1983 Corpus Christi Ship Channel, Channel Improvement Project, Feasibility Report, 2003 **National Oceanic and Atmospheric Administration Technical Report National Marine Fisheries Service**, 1993 *Sharks in the Shallows* W. Clay Creswell, 2021-06-14 A detailed account of over one hundred shark related incidents on the coast of the Carolinas from a shark bite investigator Powerful and mysterious sharks inspire both fascination and fear Worldwide oceans are home to some five hundred species and of those fifty six are known to reside in or pass through the waters off the coast of both North and South Carolina At any given time waders swimmers and surfers enjoying these waters are frequently within just one hundred feet of a shark While it is unnerving to know that sharks often swim just below the surface in the shallows W Clay Creswell a shark bite investigator for the Shark Research Institute's Global Shark Attack File explains that attacks on humans are extremely rare In 2019 the International Shark Attack File confirmed sixty four unprovoked attacks on humans including three in North Carolina and one in South Carolina While acknowledging that they pose real dangers to humans Creswell believes the fear of sharks is greatly exaggerated During his sixteen year association with the Shark Research Institute he has investigated more than one hundred shark related incidents and has maintained a database of all shark human encounters along the Carolina coastlines back to 1817 Creswell uses this data to expose the truth and history of this often sensationalized topic Beyond the statistics related to attacks in the Carolina waters *Sharks in the Shallows* offers a history of shark human interactions and an introduction to the world of shark attacks Creswell details the conditions that increase a person's chances of an encounter profiles the three species most often involved in attacks and reveals the months and time of day with the highest probability of an encounter With a better understanding of sharks responses to their environment and what motivates them to attack humans he hopes people will develop a greater appreciation of the invaluable role sharks play
