Partager La Science L'illettrisme Scientifique En Question:

Partager la science Jean-Pierre Bourguignon, Marie-Françoise Chevallier-Le Guyader, 2013-03-06 La science est-elle bien partagée ? A quelles conditions peut-elle l'être véritablement ? Comment faire naître et développer dans le public le germe d'une culture scientifique capable de substituer au sentiment d'opacité l'indifférence voire l'inquiétude ou la suspicion qu'elles suscitent parfois ? L'intérêt pour les sciences, ses méthodes et ses résultats et une authentique prise de conscience des questions scientifiques et de leurs enjeux. Cet ouvrage, le quatrième de la collection Questions vives, est parti d'un tonnement devant le néologisme Scientific Illiteracy courant outre Atlantique. Le terme d'illettrisme scientifique le traduit imparfaitement. Ce qui est en question, ce n'est pas seulement l'acquisition scolaire d'un savoir minimum, mais bien une capacité globale du public à s'informer sans se perdre dans la pléthore de messages, c'est-à-dire au sens propre se former une conscience et faire siens les fruits, comme les interrogations de la science. Chercheurs et philosophes interrogent donc la place nouvelle des sciences dans la cité, au sens politique et au sens physique, en partant de la difficulté primordiale : comment traduire en langage clair ce qu'annoncent certaines disciplines en langage si spécialisé et techniciste qu'il est absolument opaque pour le non spécialiste ? C'est le cas, notamment, mais pas exclusivement, des mathématiques et de la physique. Que peut-on dire d'une science pour en dire au moins quelque chose ? Quels défis doit relever l'éducation, à l'école et en dehors d'elle ? Comment d'autres pays, comme les États-Unis, l'Angleterre, la Hollande et d'autres cultures, l'exemple de la Corée ou des pays du Maghreb, envisagent-ils la solution du problème crucial mais si complexe du partage des sciences ? Sans dogmatisme, mais en exploitant les multiples facettes du sujet, les acteurs et, tout au moins, croisent leurs analyses et dégagent des lignes de force dont on doit espérer qu'elles sauvegarderont l'adhésion du public à l'avenir de la science.

De Vries, Gérard Ferey, 2013-05-15T06:00:00+02:00 Le désamour du public pour les sciences en général qui va jusqu'à remettre en question de leur légitimité pose la question des sciences dans la cité et de l'information du citoyen touchant les rapports d'expertise, climatologie, développement durable, OGM, etc. Ce qui met en jeu un effort de traduction de la complexité des sciences et, pointant galement des méthodes souvent archaïques d'éducation, formatage faible, accent mis sur la créativité, etc. La dernière partie du livre présente un ensemble d'expertises internationales dans les pays développés et en voie de développement.

From Additive Manufacturing to 3D/4D Printing 1 Jean-Claude André, 2017-10-30 In 1984, additive manufacturing represented a new methodology for manipulating matter, consisting of harnessing materials and/or energy to create three-dimensional physical objects. Today, additive manufacturing technologies represent a market of around 5 billion euros per year, with an annual growth between 20 and 30%. Different processes, materials and dimensions, from nanometer to decameter, within additive manufacturing techniques have led to 70 000 publications on this topic and to several thousand

patents with applications as wide ranging as domestic uses Volume 1 of this series of books presents these different technologies with illustrative industrial examples In addition to the strengths of 3D methods this book also covers their weaknesses and the developments envisaged in terms of incremental innovations to overcome them Quand la France se détourne de la science Karine Berger, Grégoire Biasini, 2025-09-10 Comment est-il possible qu'au pays des Lumières au pays de Pasteur et de Marie Curie la science soit ce point remise en cause marginalisée voire rejetée N'est-ce pas en France que le mouvement antivax s'est manifesté avant le covid N'est-ce pas également dans notre pays que le rejet des OGM a été si massif qu'on ne peut plus rouvrir le débat sur des techniques de génétique moins intrusives Ce phénomène ne entraîne-t-il un sentiment collectif pour la recherche l'invention du futur et le progrès Il fragilise le fonctionnement démocratique car le socle de nos opinions est de moins en moins la vérité construite par la science et de plus en plus la ligne politique laquelle on s'identifie Karine Berger et Grégoire Biasini analysent les facteurs d'origine de cette situation notamment l'accumulation des crises vache folle Tchernobyl qui ont branlé la société française Ils pointent la responsabilité des élites politiques et médiatiques le rôle des réseaux sociaux et soulignent qu'un point de non-retour risque d'être franchi Ils proposent des pistes pour retrouver le chemin de la confiance sans laquelle aucune communauté humaine ne peut durablement vivre ensemble Karine Berger est dirigeante dans le secteur public Elle a été députée des Hautes Alpes de 2012-2017 Depuis 2024 elle est présidente du conseil d'administration de l'Institut Henri Poincaré et membre du comité Expertise scientifique d'évaluation politique et fonctionnement démocratique pour l'Académie des sciences et l'Académie de sciences morales et politiques Grégoire Biasini fondateur du cabinet de conseil Palomar conseille les organisations sur les sujets d'acceptabilité de projets ou d'innovation notamment dimensions sanitaire et environnementale Il donne régulièrement des cours Sciences Po HEC l'X ou aux Arts et Métiers et prépare les dirigeants la gestion de crise *Process Engineering Renewal 2* Éric Schaer, Jean-Claude André, 2020-07-17 Process engineering emerged at the beginning of the 20th Century and has become an essential scientific discipline for the matter and energy processing industries Its success is incontrovertible with the exponential increase in techniques and innovations Rapid advances in new technologies such as artificial intelligence as well as current societal needs sustainable development climate change renewable energy the environment are developments that must be taken into account in industrial renewal *Process Engineering Renewal 2* focuses on research in process engineering which is partly overshadowed by the sciences that contribute to its development The external constraints of this interface science must be seen in relation to conservation sustainable development global warming etc which are linked to current success and the difficulty of taking risks in research **Process Engineering Renewal 3** Éric Schaer, Jean-Claude André, 2020-07-17 Process engineering emerged at the beginning of the 20th Century and has become an essential scientific discipline for the matter and energy processing industries Its success is incontrovertible with the exponential increase in techniques and innovations Rapid advances in new technologies such as artificial intelligence as well as current societal needs sustainable development climate change

procédés 3 Éric Schaer, Jean-Claude André, 2019-11-01 Apparu au début du siècle précédent le génie des procédés est devenu une discipline scientifique incontournable pour les industries de transformation de la matière et de l'énergie. Son succès ne se dément pas avec l'augmentation exponentielle des techniques et des innovations. Le développement rapide de nouvelles technologies comme l'intelligence artificielle ou de nouveaux besoins sociétaux : développement durable, réchauffement climatique, énergies renouvelables, environnement, etc. implique des évolutions qui doivent être prises en considération dans le nouveau industriel. L'analyse prospective réalisée et présentée dans ce troisième volume met en évidence des perturbations notables liées au développement durable, au réchauffement climatique, etc. Ces contraintes peuvent également induire des changements du système de régulation sociale, ce qui impose des évolutions majeures pour les acteurs du génie des procédés.
